requirements have been developed and implemented correctly Or to put it another way they can be used to check the safety and security of hardware and software Just how this works in real life was also of interest at the annual conference on Formal Methods in Computer Aided Design FMCAD Under the direction of Ruzica Piskac and Michael Whalen the 21st Conference in October 2021 addressed the results of the latest research in the field of formal methods A volume of conference proceedings with over 30 articles covering a wide range of formal methods has now been published for this online conference starting from the verification of hardware parallel and distributed systems as well as neuronal networks right through to machine learning and decision making procedures This volume provides a fascinating insight into revolutionary methods technologies theoretical results and tools for formal logic in computer systems and system developments [U.S. Government Research & Development Reports](#) ,1968 *Robotics Software Engineering* Ivano Malavolta, Federico Ciccozzi, Christopher Timperley, Alwin Hoffmann, 2025-11-03 Increasingly challenging domains employ robotic applications Yet Robotics still is one of the most challenging domains for software engineering Deploying robotics applications requires integrating solutions from experts in various domains including navigation path planning manipulation localization human robot interaction etc Integration of modules contributed by respective domain experts is one of the key challenges in engineering software centric systems yet only one of the cross cutting software concerns crucial to robotics As robots often operate in dynamic partially observable environments additional challenges include adaptability robustness safety and security The goal of this Research Topic is to bring together researchers with practitioners to identify new frontiers in robotics software engineering discuss challenges raised by real world applications and transfer the latest insights from research to industry This Research Topic welcomes contributions from both academic and industrial participants thus fostering active synergy between the two communities We seek contributions addressing but not limited to the following topics related to robotics software engineering Analysis of challenges in robotic software engineering Architectures that lead to reusable robotic software Challenges for defining and integrating domain specific languages for the design of robotic systems Continuous integration and deployment in robotics Identification and analysis of design principles promoting quality of service e.g performance energy efficiency Engineering the collaboration of multiple heterogeneous robots Machine learning for safety critical robotic systems Metrics to measure non functional properties e.g robustness availability etc and their application in robotic software Best practices in engineering robotic software Variability modularity and reusability in robotic software Validation and verification of robotic software Processes and tools supporting the engineering and development of robotic systems State of the art research projects innovative ideas and field based studies in robotic software engineering Lessons learned in the engineering and deployment of large scale real world integrated robot Dr Hoffmann is affiliated with XITASO GmbH IT Software Solutions All other Topic Editors declare no competing interests with regard to the Research Topic subject This Research Topic is linked with the 5th international workshop on Robotics Software Engineering RoSE 2023 colocated with
