*Cost Optimization of Structures* Hojjat Adeli, Kamal C Sarma, 2006-11-02 While the weight of a structure constitutes a significant part of the cost a minimum weight design is not necessarily the minimum cost design Little attention in structural optimization has been paid to the cost optimization problem particularly of realistic three dimensional structures Cost optimization is becoming a priority in all civil engineering projects and the concept of Life Cycle Costing is penetrating design manufacturing and construction organizations In this groundbreaking book the authors present novel computational models for cost optimization of large scale realistic structures subjected to the actual constraints of commonly used design codes As the first book on the subject this book Contains detailed step by step algorithms Focuses on novel computing techniques such as genetic algorithms fuzzy logic and parallel computing Covers both Allowable Stress Design ASD and Load and Resistance Factor Design LRFD codes Includes realistic design examples covering large scale high rise building structures Presents computational models that enable substantial cost savings in the design of structures Fully automated structural design and cost optimization is where large scale design technology is heading thus Cost Optimization of Structures Fuzzy Logic Genetic Algorithms and Parallel Computing will be of great interest to civil and structural engineers mechanical engineers structural design software developers and architectural engineers involved in the design of structures and life cycle cost optimisation It is also a pioneering text for graduate students and researchers working in building design and structural optimization

*Construction Scheduling, Cost Optimization and Management* Hojjat Adeli, Asim Karim, 2001-01-25 Construction Scheduling Cost Optimization and Management presents a general mathematical formula for the scheduling of construction projects Using this formula repetitive and non repetitive tasks work continuity considerations multiple crew strategies and the effects of varying job conditions on the performance of a crew can be modelled This book presents an entirely new approach to the construction scheduling problem It provides a practical methodology which will be of great benefit to all those involved in construction scheduling and cost optimization including construction engineers highway engineers transportation engineers contractors and architects It will also be useful for researchers and graduates on courses in construction scheduling and planning

Uniform Building Code Volume 2 International Code Council, 1997-02 The Uniform Building Code is one of the most widely adopted model building codes in the world and is a proven document meeting the needs of government units charged with enforcement of building regulation The most recent edition published in 1997 provides complete regulations covering all major aspects of building design and construction relating to fire and life safety and structural safety The provisions of the 1997 Uniform Building Code were published in three volumes to help building inspectors plans examiners architects and structural designers locate provisions applicable to their respective fields without the need to search through all provisions The two most popular volumes 1 and 2 are now available from Delmar Learning Volume 2 contains provisions for structural engineering design including those design provisions formerly in the

UBC Standards These design provisions have been incorporated into the applicable chapter as divisions of the chapter
