

This work book will guide you safely, in step-by-step descriptions, through every detail of the NMR experiments within, beginning with 1D routine experiments and ending with a series of advanced 2D experiments on a protein.

- Which experiment can best yield the desired information?
- How must the chosen experiment be performed?
- How does one read the required information from the spectrum?
- How does this particular pulse sequence work?
- Which other experiments give similar information?

This third edition of the book, following its two highly successful predecessors, has been revised and expanded to cover experiments. They are organized in 13 chapters, covering test procedures and routine spectra, variable temperature measurements, the use of auxiliary magnets, 2D multipolar experiments, spectra of internuclears, and the application of selective pulses. The second and third dimensions are introduced using pulsed field gradients, and experiments on solid state materials are described. A key part describes 2D experiments on the protein ubiquitin with 75 atoms each.

What is new in this third edition?

1. 14 new experiments have been inserted into the 13 chapters that were in the 2nd edition, e.g. alpha-beta SELINCOR TOCSY, WTE, DQSY, α -COSY, HMQC, HMQC with selective pulses, HETLOC, Isolated HMQC, (L,S) and (L,S)ADROQUATE, STD, REDOR, and HETMAN.
2. 10 new protein NMR experiments have been specially derived and are collected in the newly added Chapter 13, ProteinNMR, for which one needs a special model sample: fully ^{13}C - and ^{15}N -labeled human ubiquitin. Techniques used include the constant time principle, the PEP method, filters, gradient selection, and the echo/anti-echo procedure.

The guide has been written by experts in this field, following the principle of learning by doing: all the experiments have been specially performed for this book, exactly as described and shown in the spectra that are reproduced. Being a reference source and work book for the NMR laboratory as well as a textbook, it is a must for every scientist working with NMR, as well as for students preparing for their laboratory courses.
