

ACCT 100 - INTRODUCTION TO ACCOUNTING

Chapter 2

Analyzing Business Transactions

A business transaction is a financial event that changes the resources of a firm. Examples of common business transactions include such things as purchases, sales, payments, and receipts of cash among other things.

There are five basic types of accounts. They are summarized in this chapter. We will be using this information to form the foundation for everything else we will be doing over the course of the semester.

Assets

- Properties or things of value owned by a business
- Examples include cash, equipment, patents, land, supplies, etc.

Liabilities

- Debts or obligations
- Money that is owed to others
- Claims of creditors (i.e. someone who you owe money to) against the assets of a business

Equity

- The owner's rights or claims to the assets of a business (after the creditors)
- Synonymous with the terms "capital" and "net worth."
- The owner's investment (adjusted for other things you will learn about)

Revenues

- Amounts earned by a business
- Can be in the form of cash, credit card receipts, or credit sales to charge customers (who will pay for goods/services at a later time)
- GAAP says revenues should be recorded when earned, not necessarily when paid
- When businesses generate revenues, the owner's equity increases

Expenses

- Costs of the business that relate to the earning of revenues
