Introduction to Analysis in Several Variables: Advanced Calculus Michael E. Taylor, 2020-07-27 This text was produced for the second part of a two part sequence on advanced calculus whose aim is to provide a firm logical foundation for analysis The first part treats analysis in one variable and the text at hand treats analysis in several variables After a review of topics from one variable analysis and linear algebra the text treats in succession multivariable differential calculus including systems of differential equations and multivariable integral calculus It builds on this to develop calculus on surfaces in Euclidean space and also on manifolds It introduces differential forms and establishes a general Stokes formula It describes various applications of Stokes formula from harmonic functions to degree theory The text then studies the differential geometry of surfaces including geodesics and curvature and makes contact with degree theory via the Gauss Bonnet theorem The text also takes up Fourier analysis and bridges this with results on surfaces via Fourier analysis on spheres and on compact matrix groups
