Advanced Gas Path Ge:

Advanced Technologies for Gas Turbines National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Committee on Advanced Technologies for Gas Turbines, 2020-03-19 Leadership in gas turbine technologies is of continuing importance as the value of gas turbine production is projected to grow substantially by 2030 and beyond Power generation aviation and the oil and gas industries rely on advanced technologies for gas turbines Market trends including world demographics energy security and resilience decarbonization and customer profiles are rapidly changing and influencing the future of these industries and gas turbine technologies Technology trends that define the technological environment in which gas turbine research and development will take place are also changing including inexpensive large scale computational capabilities highly autonomous systems additive manufacturing and cybersecurity It is important to evaluate how these changes influence the gas turbine industry and how to manage these changes moving forward Advanced Technologies for Gas Turbines identifies high priority opportunities for improving and creating advanced technologies that can be introduced into the design and manufacture of gas turbines to enhance their performance The goals of this report are to assess the 2030 gas turbine global landscape via analysis of global leadership market trends and technology trends that impact gas turbine applications develop a prioritization process define high priority research goals identify high priority research areas and topics to achieve the specified goals and direct future research Findings and recommendations from this report are important in guiding research within the gas turbine industry and advancing electrical power generation commercial and military aviation and oil and gas production

Gas Turbine Combined Cycle Power Plants S. Can Gülen, 2026-04-17 Gas Turbine Combined Cycle Power Plants discusses the solution of daily problems encountered in the design development optimization operation and maintenance of gas and steam turbine combined cycle power plants It reflects developing trends within decarbonization and large power demand boost from hyperscale data centers accelerated by generative artificial intelligence AI The book contains a wealth of first principles based calculation methods comprising key formulae charts rules of thumb and other tools developed by the author over the course of 30 years spent in the power generation industry The revised edition features new and expanded sections on integrated gasification combined cycle and carbon capture and new chapters on recent developments such as hyperscalers and the role of gas turbines in decarbonization with a special focus on hydrogen This book is intended for original equipment manufacturers OEMs consulting engineers and plant operators involved with the design of power plants and large scale factories It will also benefit research and development studies in both academia and government industry laboratories

Advanced Energy Systems Nikolai V. Khartchenko, Vadym M. Kharchenko, 2013-12-20 This second edition to a popular first provides a comprehensive fully updated treatment of advanced conventional power generation and cogeneration plants as well as alternative energy technologies Organized into two parts Conventional Power

Generation Technology and Renewable and Emerging Clean Energy Systems the book covers the fundamentals analysis design and practical aspects of advanced energy systems thus supplying a strong theoretical background for highly efficient energy conversion New and enhanced topics include Large scale solar thermal electric and photovoltaic PV plants Advanced supercritical and ultra supercritical steam power generation technologies Advanced coal and gas fired power plants PP with high conversion efficiency and low environmental impact Hybrid integrated i e fossil fuel REN power generation technologies such as integrated solar combined cycle ISCC Clean energy technologies including clean coal H2 and fuel cell plus integrated power and cogeneration plants i e conventional PP fuel cell stacks Emerging trends including magnetohydrodynamic MHD generator and controlled thermonuclear fusion reactor technologies with low zero CO2 emissions Large capacity offshore and on land wind farms as well as other renewable REN power generation technologies using hydro geothermal ocean and bio energy systems Containing over 50 solved examples plus problem sets full figures appendices references and property data this practical guide to modern energy technologies serves energy engineering students and professionals alike in design calculations of energy systems
