more meaningful Introductory chapters on these subjects constitute Part I of the book Part 2 is composed of the dissection guide in which text and illustrations are juxtaposed as much as possible in order to facilitate the use of the book in the dissection room The method of dissection is similar to dissection procedures used in many medical schools throughout the world and variations of the technique have been published by several authors including Ivar Broman in the Manniskohjarnan The Human Brain published by Gleerups F6rlag Lund 1926 and Laszlo Komaromy in Dissection of the Brain published by Akademiai Kiado Budapest 1947 The great popularity of the CT scanner justifies an extra laboratory session for the comparison of nearly horizontal brain sections with matching CT scans

Advances and Technical Standards in Neurosurgery J. D. Pickard,2012-12-06 As an addition to the European postgraduate training system for young neurosurgeons we began to publish in 1974 this series of Advances and Technical Standards in Neurosurgery which was later sponsored by the European Association of Neurosurgical Societies This series was first discussed in 1972 at a combined meeting of the Italian and German Neurosurgical Societies in Taormina the founding fathers of the series being Jean Brihaye Bernard Pertuiset Fritz Loew and Hugo Krayenbuhl Thus were established the principles of European co operation which have been born from the European spirit flourished in the European

Association and have been associated throughout with this series. The fact that the English language is now the international medium for communication at European scientific conferences is a great asset in terms of mutual understanding. Therefore we have decided to publish all contributions in English regardless of the native language of the authors. All contributions are submitted to the entire editorial board before publication of any volume for scrutiny and suggestions for revision. Our series is not intended to compete with the publications of original scientific papers in other neurosurgical journals. Our intention is rather to present fields of neurosurgery and related areas in which important recent advances have been made. The contributions are written by specialists in the given fields and constitute the first part of each volume.
