

## Solution of Homework 2

### Social Networks

**Exercise 4.4** Let  $A$  be a square  $n \times n$  matrix whose rows are orthonormal. Prove that the columns of  $A$  are orthonormal.

**Solution:** Let  $A$  be  $\begin{bmatrix} a_{11} & \dots & a_{1n} \\ \dots & \dots & \dots \\ a_{n1} & \dots & a_{nn} \end{bmatrix}$ , the rows are orthonormal so  $r_i \cdot r_j = 1$  if  $i =$

$j$  and 0 otherwise, where  $r_i$  is the  $i$ -th row of  $A$ .

The means  $AA^T = A^T A = I$  since  $A$  is  $n \times n$  matrix.

Therefore we can get  $c_i \cdot c_j = 1$  if  $i = j$  and 0 otherwise, where  $c_i$  is the  $i$ -th column of  $A$ . Thus the columns are also orthonormal.

**Exercise 4.6** Prove that the left singular vectors of  $A$  are the right singular vectors of  $A^T$ .

**Solution:** Let  $A = UDV^T$  by SVD where  $U$  is composed of the left singular values of  $A$  and  $V$  is composed of the right singular values of  $A$ . Then  $A^T = (UDV^T)^T = VDU^T$ , so the left singular vectors of  $A$  are the right singular vectors of  $A^T$ .

### Exercise 4.31

1. Consider the pairwise distance matrix for twenty US cities given below. Use the algorithm of Exercise 2 to place the cities on a map of the US.
2. Suppose you had airline distances for 50 cities around the world. Could you use these distances to construct a world map?

#### Solution:

1. In order to put the cities on a map, we would compute the rank 2 approximation of the matrix of distance. This gives us a projection of the rows of the original matrix onto a two-dimensional subspace spanned by the first 2 singular vectors of the original matrix.
2. Yes, map  $M$  to a three-dimensional subspace. Do a rank 3 approximation of the distance matrix to get an approximate map of the world in three dimensions.

Resource Allocation in Next Generation Wireless Networks  
Wayne Li, Yi Pan, 2006 Next generation wireless and mobile communication systems are rapidly evolving to satisfy the demands of various network users Due to the great success and enormous impact of IP networks high speed transmission is now possible for both indoor and outdoor wireless systems internet access and web browsing have become the ruling paradigm for next generation system It is envisioned that new generation wireless networks and hand held terminals will support a wide variety of multimedia services such as multimedia web browsing video and news on demand mobile office system stock market information and so on to mobile users anywhere anytime in an uninterrupted and seamless way with low powered handsets The characteristics of wireless links as well as the desire to maintain connectivity while on the move offer significant challenges to provisioning quality of service and the related performance is of central interest Since the resources such as time frequency and code in the wireless segments of such networks are very limited over dimensioning the network resource is equivalent to poor capital investment while congestion at busy hours could mean lost calls and lost revenues It is therefore critical for wireless network designers to utilise these resources efficiently and effectively In response to the above demand for next generation wireless and mobile communication systems this book aims at providing a timely and concise reference of the current activities and findings in the relevant technical fields The primary goal is to address the key technical issues pertaining to the integrated new systems and present novel technical contributions The book contains 14 invited chapters from prominent researchers working in this area around the world
