Stress Formulation in Three-Dimensional Elasticity Surya N. Patnaik, 2001 The theory of elasticity evolved over

centuries through the contributions of eminent scientists like Cauchy Navier Hooke Saint Venant and others It was deemed complete when Saint Venant provided the strain formulation in 1860 However unlike Cauchy who addressed equilibrium in the field and on the boundary the strain formulation was confined only to the field Saint Venant overlooked the compatibility on the boundary Because of this deficiency a direct stress formulation could not be developed Stress with traditional methods must be recovered by backcalculation differentiating either the displacement or the stress function We have addressed the compatibility on the boundary Augmentation of these conditions has completed the stress formulation in elasticity opening up a way for a direct determination of stress without the intermediate step of calculating the displacement or the stress function
