Williams,2020-07-13 Text Analytics with Python Text analytics is all about obtaining relevant and useful information from some unstructured data Text analytics techniques can be of great importance and can provide amazing help for various organizations that aim to derive some potentially valuable business insights from an amazingly large collection of text based content like social media streams emails or word documents Sure text analytics using natural language processing machine learning and statistical modeling can be very challenging since human language is commonly inconsistent It contains various ambiguities mainly caused by inconsistent semantics and syntax Fortunately text analytics software can easily help you by transposing phrases and words contained in unstructured data into some numerical values that you later link with structured data contained in data set It is more than apparent that major enterprises are increasingly and rapidly turning to text analytics techniques in order to improve their businesses as well as overall customer satisfaction We are witnessing that amazing variety and volume when it comes to data generated across different feedback channels which continues to grow and expand providing various businesses with a wealth of valuable information regarding their customers It is more than apparent that sifting through all available content would be amazingly time consuming to be done manually However understanding those insights held in data is more than critical when it comes to getting an accurate view of the customer s voice We are also witnessing the next chapter of text analytics approach since it s already developing that solid ground It will also continue to be among other technical necessities today and into the future In order to keep up with the future embark on your own text analytics journey having this book by your side as your best companion In this book ou will learn Text analytics process How to build a corpus and analyze sentiment Named entity extraction with Groningen meaning bank corpus How to

train your system Getting started with NLTK How to search syntax and tokenize sentences Automatic text summarization Stemming word and topic modeling with NLTK Using scikit learn for text classification Part of speech tagging and POS tagging models in NLTK And much much more Get this book NOW and learn more about Text Analytics with Python *Text Mining with Machine Learning* Jan Žižka,František Dařena,Arnošt Svoboda,2019-10-31 This book provides a perspective on the application of machine learning based methods in knowledge discovery from natural languages texts By analysing various data sets conclusions which are not normally evident emerge and can be used for various purposes and applications The book provides explanations of principles of time proven machine learning algorithms applied in text mining together with step by step demonstrations of how to reveal the semantic contents in real world datasets using the popular R language with its implemented machine learning algorithms The book is not only aimed at IT specialists but is meant for a wider audience that needs to process big sets of text documents and has basic knowledge of the subject e g e mail service providers online shoppers librarians etc The book starts with an introduction to text based natural language data processing and its goals and problems It focuses on machine learning presenting various algorithms with their use and possibilities and reviews the positives and negatives Beginning with the initial data pre processing a reader can follow the steps provided in the R language including the subsuming of various available plug ins into the resulting software tool A big advantage is that R also contains many libraries implementing machine learning algorithms so a reader can concentrate on the principal target without the need to implement the details of the algorithms her or himself To make sense of the results the book also provides explanations of the algorithms which supports the final evaluation and interpretation of the results The examples are demonstrated using realworld data from commonly accessible Internet sources
