Build an SAP IDOC Receiver Using the SAP .Net Connector

Overview

This blog post describes how to receive an IDOC from an SAP system, using the SAP .Net Connector and Microsoft C#.

Introduction

The SAP .Net Connector simplifies creating C# programs that can interoperate with an SAP host. The SAP .Net Connector is available from the <u>SAP Service Marketplace</u>. You must have access to the SAP Service Marketplace to be able to download the SAP .Net Connector. The SAP .Net Connector must be installed on your development machine before we begin.

An IDOC is an Interface Document that is used to send or receive information to or from an SAP host. An IDOC will consist of a header record and as many detail records as necessary. The header records follow the format of the EDI_DC40 table, and the detail records follow the format of the EDI_DD40 table. The exact format of the payload in the detail records depends on the type of IDOC being transmitted.

C# Code

We will create an application that displays the contents of IDOCs received from an SAP host. Use Visual Studio 2008 and create a new C# console application. Name the new application IdocReceive.

Add Reference to SAP .Net Connector.

In the Solution Explorer, right-click on References and choose Add New Reference. Select both SAP.Connector.dll and SAP.Connector.Rfc.dll. Typically, these files will be found in C:\Program Files\SAP\SAP .Net Connector 2.0.

Our program will instantiate a custom class, **IdocReceiver**, that encapsulates the SAP transmit and receive logic.

IdocReceiver inherits from the SAP .Net Connector. IdocReceiver overrides methods from the SAP .Net Connector to manage the flow of IDOCs from the SAP host. IdocReceiver also subscribes to two events exposed by the SAP .Net Connector that perform the actual transmission.
