Hybrid Methods In Pattern Recognition Horst Bunke,Abraham Kandel,2002-05-22 The field of pattern recognition has seen enormous progress since its beginnings almost 50 years ago A large number of different approaches have been proposed Hybrid methods aim at combining the advantages of different paradigms within a single system Hybrid Methods in Pattern Recognition is a collection of articles describing recent progress in this emerging field It covers topics such as the combination of neural nets with fuzzy systems or hidden Markov models neural networks for the processing of symbolic data structures hybrid methods in data mining the combination of symbolic and subsymbolic learning and others Also included is recent work on multiple classifier systems Furthermore the book deals with applications in on line and off line handwriting recognition remotely sensed image interpretation fingerprint identification and automatic text categorization **Networks** Mark Newman,2018-07-04 The study of networks including computer networks social networks and biological networks has attracted enormous interest in the last few years The rise of the Internet and the wide availability of inexpensive computers have made it possible to gather and analyze network data on an unprecedented scale and the development of new theoretical tools has allowed us to extract knowledge from networks of many different kinds The study of networks is broadly interdisciplinary and central developments have occurred in many fields including mathematics physics computer and information sciences biology and the social sciences This book brings together the most important breakthroughs in each of these fields and presents them in a coherent fashion highlighting the strong interconnections between work in different areas Topics covered include the measurement of networks methods for analyzing network data including methods developed in physics statistics and sociology fundamentals of graph theory computer algorithms mathematical models of networks including random graph models and generative models and theories of dynamical processes taking place on networks

Artificial Intelligence Methods in the Environmental Sciences Sue Ellen Haupt,Antonello Pasini,Caren Marzban,2008-11-28 How can environmental scientists and engineers use the increasing amount of available data to enhance our understanding of planet Earth its systems and processes This book describes various potential approaches based on artificial intelligence AI techniques including neural networks decision trees genetic algorithms and fuzzy logic Part I contains a series of tutorials describing the methods and the important considerations in applying them In Part II many practical examples illustrate the power of these techniques on actual environmental problems International experts bring to life ways to apply AI to problems in the environmental sciences While one culture entwines ideas with a thread another links them with a red line Thus a red thread ties the book together weaving a tapestry that pictures the natural data driven AI methods in the light of the more traditional modeling techniques and demonstrating the power of these data based methods
