Advances in Mechanical Testing of Engineering Materials Stanislaw Radkowski, Szymon Gontarz, 2023-10-12 Modern technical facilities are constructions that are sophisticated in terms of functionality and in terms of the material technologies used Therefore it becomes necessary to obtain reliable information about the material and its current state This

is not easy task considering the variety of materials present and their applications Therefore this reprint brings together publications focused on two areas new diagnostic methods adapted to new materials and the procurement of new information about conventional materials used in innovative technical solutions The solutions to the above are seen in the use of modern sensory systems enabling and seeking information in new physical relationships i e analyzing cross effects In this collection we can read about research on intelligent materials based for example on microgranules or rubber ferritic conglomerate which in addition to fulfilling functional tasks can provide valuable information about the operation of the object Innovative ways of obtaining information about composites steel concrete and even printed plastic elements are discussed Additionally a review is provided covering topics from miniature steel samples to the elements of a construction crane This reprint is a necessary supplement and provides an exchange of experience and achievements in acquiring new information on both classic and modern materials used currently in mechanical engineering By accessing new information on materials and their condition it will be possible to maintain the safety and reliability of mechanical engineering facilities at an appropriate level
