Plant Breeding M.D. Hayward,N.O. Boserup,T. Romagosa,2012-12-06 Our requirement for plant breeders to be

successful has never been greater. However, one views the forecasted numbers for future population growth, we will need in the immediate future to be feeding, clothing, and housing many more people than we do inadequately at present. Plant breeding represents the most valuable strategy in increasing our productivity in a way that is sustainable and environmentally sensitive. Plant breeding can rightly be considered as one of the oldest multidisciplinary subjects that is known to humans. It was practised by people who first started to carry out a settled form of agriculture. The art, as it must have been at that stage, was applied without any formal underlying framework but achieved dramatic results, as witnessed by the forms of cultivated plants we have today. We are now learning how to apply successfully the results of yet imperfect scientific knowledge. This knowledge is, however, rapidly developing, particularly in areas of tissue culture, biotechnology, and molecular biology. Plant breeding's inherent multifaceted nature means that, alongside obvious subject areas like genetics, we also need to consider areas such as statistics, physiology, plant pathology, entomology, biochemistry, weed science, quality seed characteristics, reproductive biology, trial design, selection, and computing. It therefore seems apparent that modern plant breeders need to have a grasp of a wide range of scientific knowledge and expertise if they are successfully to exploit the techniques, protocols, and strategies which are open to them.

PLANT BREEDING IN 21ST CENTURY B.D. Singh, N.S. Shekhawat, 2019-05-01. The discipline of plant breeding has undergone transformation due to the assimilation of the rapid developments in molecular biology. The existing books on plant breeding deal mainly with the classical approaches, while specialized books on molecular approaches usually lack discussion of the classical methods. The book *Plant Breeding for 21st Century* attempts to present the complete picture of plant breeding, ranging from the classical to the molecular approaches applied to crop improvement. The book is divided into four sections: Classical Plant Breeding, Transgenic technology, Molecular Markers, and Miscellaneous. The first section deals with the classical plant breeding and is divided into eight chapters. The second section has four chapters and describes transgenic technology. The third section discusses various aspects of molecular markers and is spread over three chapters. The final section has a single chapter dealing with variety release, seed multiplication, and intellectual property rights. This book is designed primarily for graduate students, viz. B.Sc. agriculture and B.Sc. science students with botany as one of the subjects who would get their first exposure to plant breeding. It would also be useful for the post-graduate students, especially in botany, and to teachers of the subject. The book is written in simple and easy-to-understand language. Illustrations and photographs have been provided wherever they were expected to facilitate comprehension of the subject under discussion.

Principles of Plant Breeding Robert W. Allard, 1999-05-10 As ancient as agriculture itself plant breeding is one of civilization's oldest activities Today world food production is more dependent than ever on the successful cultivation of only a handful of major crops while continuing advances in agriculture rely on successfully breeding new varieties that are well adapted to their human influenced ecological circumstances Plant breeding involves elements of both natural and cultural selection a process which operates on individual plants and on plant populations This book offers the most recent detailed knowledge of plant reproduction and their environmental interaction which can help guide new breeding programs and help insure continuing progress in providing more food for growing populations produced with better care of the environment
