Ultra Low Power Capacitive Sensor Interfaces Wouter Bracke, Robert Puers, Chris Van Hoof, 2007-06-15 The increasing performance of smart microsystems merging sensors signal processing and wireless communication promises to have a pervasive impact during the coming decade These autonomous microsystems find applications in sport evaluation health care environmental monitoring and automotive systems They gather data from the physical world convert them to electrical form compensate for interfering variables or non linearities and either act directly on them or transfer it to other systems Most often these sensor systems are developed for a specific application This approach leads to a high recent design cost A generic front end architecture where only the sensors and the microcontroller software are customized to the selected application would reduce the costs significantly This work presents a new generic architecture for autonomous sensor nodes The modular design methodology provides a flexible way to build a complete sensor interface out of configurable blocks The settings of these blocks can be optimized according to the varying needs of the application Furthermore the system can easily be expanded with new building blocks The modular system is illustrated in a Generic Sensor Interface Chip GSIC for capacitive sensors Many configuration settings adapt the interface to a broad range of applications The GSIC is optimized for ultra low power consumption It achieves an ON state current consumption of 40 nA

Microcontrollers and Microcomputers Fredrick M. Cady, 2010 This book takes a unique processor agnostic approach to teaching the core course on microcontrollers or embedded systems taught at most schools of electrical and computer engineering Most books for this course teach students using only one specific microcontroller in the class Cady however studies the common ground between microcontrollers in one volume As there is no other book available to serve this purpose in the classroom readership is broadened to anyone who accepts its pedagogical value not simply those courses that use the same microcontroller Because the text is purposefully processor non specific it can be used with processor specific material such as manufacturer's data sheets and reference manuals or with texts such as Software and Hardware Engineering Motorola M68HC11 or Software and Hardware Engineering Motorola M68HC12 The fundamental operation of standard microcontroller features such as parallel and serial I/O interfaces interrupts analog to digital conversion and timers is covered with attention paid to the electrical interfaces needed
