**Introduction to Scientific Visualization** Helen Wright, 2007-08-03 AboutThisBook This book

was rst suggested to Springer in 2004 though its origins go back to changes made two years earlier to the structure of the University of Hull s Computer Science programme At the same time my own visualization search was leading towards a systematic view of data and techniques that I felt could be educationally valuable In 2003 I thus sat down with some trepidation to write a visualization course founded on research in the area but nonetheless accessible to students This course

could however involve no mathematics beyond GCSE in line with university admissions practices of that time Writing the course involved generating many new illustrations in the form of both line drawings and visualization screenshots and writing to get maximum mileage out of this effort the idea of writing a book to accompany the course came about At the University of Hull our practical visualization teaching is based on IRIS Explorer an application builder type package from NAG Ltd Originally this book was to have been both an introduction to visualization and a handbook for beginners in IRIS Explorer with virtual laboratories running throughout it to illustrate certain points Following comments from reviewers however its emphasis has changed
