**Algorithms** Sanjoy Dasgupta,2008 *Variants of Evolutionary Algorithms for Real-World Applications* Raymond Chiong,Thomas Weise,Zbigniew Michalewicz,2011-11-13 Evolutionary Algorithms EAs are population based stochastic search algorithms that mimic natural evolution Due to their ability to find excellent solutions for conventionally hard and dynamic problems within acceptable time EAs have attracted interest from many researchers and practitioners in recent years This book *Variants of Evolutionary Algorithms for Real World Applications* aims to promote the practitioner s view on EAs by providing a comprehensive discussion of how EAs can be adapted to the requirements of various applications in the real world domains It comprises 14 chapters including an introductory chapter re visiting the fundamental question of what an EA is and other chapters addressing a range of real world problems such as production process planning inventory system and supply chain network optimisation task based jobs assignment planning for CNC based work piece construction mechanical ship design tasks that involve runtime intense simulations data mining for the prediction of soil properties automated tissue classification for MRI images and database query optimisation among others These chapters demonstrate how different types of problems can be successfully solved using variants of EAs and how the solution approaches are constructed in a way that can be understood and reproduced with little prior knowledge on optimisation

[Service Research Challenges and Solutions for the Future Internet](#) M. Papazoglou,Klaus Pohl,Michael Parkin,Andreas Metzger,2010-12-15 S Cube s Foundations for the Internet of Services Today s Internet is standing at a crossroads The Internet has evolved from a source of information to a critical infrastructure which underpins our lives and economies The demand for more multimedia content more interconnected devices more users a richer user experience services available any time and anywhere increases the pressure on existing networks and service platforms The Internet needs a fundamental rearrangement to be ready to meet future needs One of the areas of research for the Future Internet is the Internet of S vices a vision of the Internet where everything e g information software platforms and infrastructures is available as a service Services available on the Internet of Services can be used by anyone if they are used according to the policies de ned by the provider and they can be extended with new services by anyone Advantages of the Internet of Services include the p sibility to build upon other people s e orts and the little investment needed upfront to develop an application The risk involved in pursuing new business ideas is diminished and might lead to more innovative ideas being tried out in practice It will lead to the appearance of new companies that are able to operate in niche areas providing services to other companies that will be able to focus on their core business
