[Data Analysis Using Regression and Multilevel/hierarchical Models](#) Andrew Gelman, 2009 *Bayesian Statistical Modeling with Stan, R, and Python* Kentaro Matsuura, 2023-01-24 This book provides a highly practical introduction to Bayesian statistical modeling with Stan which has become the most popular probabilistic programming language The book is divided into four parts The first part reviews the theoretical background of modeling and Bayesian inference and presents a modeling workflow that makes modeling more engineering than art The second part discusses the use of Stan CmdStanR and CmdStanPy from the very beginning to basic regression analyses The third part then introduces a number of probability distributions nonlinear models and hierarchical multilevel models which are essential to mastering statistical modeling It also describes a wide range of frequently used modeling techniques such as censoring outliers missing data speed up and parameter constraints and discusses how to lead convergence of MCMC Lastly the fourth part examines advanced topics for real world data longitudinal data analysis state space models spatial data analysis Gaussian processes Bayesian optimization dimensionality reduction model selection and information criteria demonstrating that Stan can solve any one of these problems in as little as 30 lines Using numerous easy to understand examples the book explains key concepts which continue to be useful when using future versions of Stan and when using other statistical modeling tools The examples do not require domain knowledge and can be generalized to many fields The book presents full explanations of code and math formulas enabling readers to extend models for their own problems All the code and data are on GitHub

Maximum Likelihood for Social Science Michael D. Ward, John S. Ahlquist, 2018-11-15 This volume provides a practical introduction to the method of maximum likelihood as used in social science research Ward and Ahlquist focus on applied computation in R and use real social science data from actual published research Unique among books at this level it develops simulation based tools for model evaluation and selection alongside statistical inference The book covers standard models for categorical data as well as counts duration data and strategies for dealing with data missingness By working through examples math and code the authors build an understanding about the contexts in which maximum likelihood methods are useful and develop skills in translating mathematical statements into executable computer code Readers will not only be taught to use likelihood based tools and generate meaningful interpretations but they will also acquire a solid foundation for continued study of more advanced statistical techniques

Telling Stories with Data Rohan Alexander, 2023-07-27 The book equips students with the end to end skills needed to do data science That means gathering cleaning preparing and sharing data then using statistical models to analyse data writing about the results of those models drawing conclusions from them and finally using the cloud to put a model into production all done in a reproducible way At the moment there are a lot of books that teach data science but most of them assume that you already have the data This book fills that gap by detailing how to go about gathering datasets cleaning and preparing them before analysing them There are also a lot of books that teach statistical modelling but few of them teach how to communicate the results of the models and how they help us learn about the world Very few data science textbooks cover ethics and most of those that do have a token ethics chapter Finally reproducibility is not often emphasised in data science books This book is based around a straight forward workflow conducted in an ethical and reproducible way gather data prepare data analyse data and communicate those findings This book will achieve the goals by working through extensive case studies in terms of gathering and preparing data and integrating ethics throughout It is specifically designed around teaching how to write about the data and models so aspects such as writing are explicitly covered And finally the use of GitHub and the open source statistical language R are built in throughout the book Key Features Extensive code examples Ethics integrated throughout Reproducibility integrated throughout Focus on data gathering messy data and cleaning data
