**Real-Time Video Compression** Raymond Westwater, Borko Furht, 2007-08-28 Real Time Video Compression Techniques and Algorithms introduces the XYZ video compression technique which operates in three dimensions eliminating the overhead of motion estimation First video compression standards MPEG and H 261 H 263 are described They both use asymmetric compression algorithms based on motion estimation Their encoders are much more complex than decoders The XYZ technique uses a symmetric algorithm based on the Three

Dimensional Discrete Cosine Transform 3D DCT 3D DCT was originally suggested for compression about twenty years ago however at that time the computational complexity of the algorithm was too high it required large buffer memory and was not as effective as motion estimation We have resurrected the 3D DCT based video compression algorithm by developing several enhancements to the original algorithm These enhancements make the algorithm feasible for real time video compression in applications such as video on demand interactive multimedia and videoconferencing The demonstrated results presented in this book suggest that the XYZ video compression technique is not only a fast algorithm but also provides superior compression ratios and high quality of the video compared to existing standard techniques such as MPEG and H 261 H 263 The elegance of the XYZ technique is in its simplicity which leads to inexpensive VLSI implementation of any XYZ codec Real Time Video Compression Techniques and Algorithms can be used as a text for graduate students and researchers working in the area of real time video compression In addition the book serves as an essential reference for professionals in the field
