Applied Probability Models Do Le Minh,2001 Intended for a course in Probability Models at the undergraduate or graduate level this book is designed for those who will actually use probability and is designed to fit diverse audiences business students applied engineering students and biology students The course focuses on applications of probability through the presentation of models rather than theory alone In this practical and interesting book author Do Le Paul Minh provides accessible coverage for a course in probability models Minh motivates the material with interesting application problems relating to medicine

business and engineering many of which are based on real studies and applications Throughout the book he thoughtfully integrates the use of computers and spreadsheets to solve problems The Science of Decision Making Eric V. Denardo,2002 Provides the reader with a perspective on the efficient operation of complicated systems Spreadsheets are used to employ and teach techniques Includes the facets of probability that relate to decision making **Introduction to Management Science** Bernard W. Taylor,2002 For courses in Management Science Quantitative Methods or Decision Models This widely adopted text presents an accessible introduction to the techniques and applications of management science It is designed to make the subject easy to understand interesting and accessible for students with limited mathematical background or skills The author focuses on management science not only as a collection of techniques and processes but as a philosophy and method for approaching problems in a logical manner and includes spreadsheets with solutions in every chapter Difference Equations with Public Health Applications Lemuel A. Moyé,Asha Seth Kapadia,2000-09-22 This study of difference equations with public health applications develops the methodology for the solution of the general kth order linear difference equation using the generating function approach It includes an examination of the dynamics of disease spread and containment in populations using illness death models There are over 1000 featured mathematical expressions Two Probability Models for Multiple Choice Ability Tests Madelaine Carey Ramey,1969 **Mathematical Modeling** Mark M. Meerschaert,2007-06-18 Mathematical Modeling Third Edition is a general introduction to an increasingly crucial topic for today s mathematicians Unlike textbooks focused on one kind of mathematical model this book covers the broad spectrum of modeling problems from optimization to dynamical systems to stochastic processes Mathematical modeling is the link between mathematics and the rest of the world Meerschaert shows how to refine a question phrasing it in precise mathematical terms Then he encourages students to reverse the process translating the mathematical solution back into a comprehensible useful answer to the original question This textbook mirrors the process professionals must follow in solving complex problems Each chapter in this book is followed by a set of challenging exercises These exercises require significant effort on the part of the student as well as a certain amount of creativity Meerschaert did not invent the problems in this book they are real problems not designed to illustrate the use of any particular mathematical technique Meerschaert s emphasis on principles and general techniques offers students the mathematical background they need to model problems in a wide range of disciplines Increased support for instructors including MATLAB material New sections on time series analysis and diffusion models Additional problems with international focus such as whale and dolphin populations plus updated optimization problems **Advances in Applied Probability** ,1991 **A Transition Probability Model Analysis of Cell Cycle Dependent Protein Production** Scott John Cain,1997 **Industrial Statistics** Ron S.
