Advisory Group for Aerospace Research and Development. Structures and Materials Panel,1971 The document describes the present state of development of the use of mathematical programming techniques in the optimum design of aerospace and similar structures Although optimization with respect to

cost is considered when possible the main emphasis is on the minimization of weight due to the overwhelming importance of this parameter in aerospace applications and also due to the fact that it is one of the few merit functions that can be defined with reasonable precision The use of mathematical programming techniques in the selection of materials is also discussed to the limited extent meaningful at the present time Author **Engineering Design Handbook** United States. Army Materiel Command,1973 Mathematical Reviews ,2006 **Multi-Parametric Programming** Efstratios N. Pistikopoulos,Michael C. Georgiadis,Vivek Dua,2007-04-09 This first book to cover all aspects of multi parametric programming and its applications in process systems engineering includes theoretical developments and algorithms in multi parametric programming with applications from the manufacturing sector and energy and environment analysis The volume thus reflects the importance of fundamental research in multi parametric programming applications developing mechanisms for the transfer of the new technology to industrial problems Since the topic applies to a wide range of process systems as well as due to the interdisciplinary expertise required to solve the challenge this reference will find a broad readership Inspired by the leading authority in the field the Centre for Process Systems Engineering at Imperial College London
