of user written programs for simulation Another method that can be used for simulation is the use of spreadsheets which is also described with the help of an example A new important topic of today being polysilicon used in the manufacture of computer chips and solar panels is also covered in detail

Chemical Process Equipment Design Richard Turton, Joseph A. Shaeiwitz, 2017 Trends such as shale gas resource development call for a deeper understanding of chemical engineering equipment and design Chemical Process Equipment Design complements leading texts by providing concise focused coverage of these topics filling a major gap in undergraduate chemical engineering education Richard Turton and Joseph A Shaeiwitz present relevant design equations show how to analyze operation of existing equipment offer a practical methodology for designing new equipment and introduce software programs for solving common problems Theoretical derivations are avoided in favor of working equations practical computational strategies and approximately eighty realistic worked examples The authors identify which equation applies to each situation and show exactly how to use it to design equipment By the time undergraduates have worked through this material they will be able to create preliminary designs for most process equipment found in a typical chemical plant that processes gases and or liquids They will also learn how to evaluate the performance of that equipment even when operating conditions differ from the design case

Mass Transfer A. P. SINHA, PARAMESWAR DE, 2012-05-09 This book introduces the fundamental principles of the mass transfer phenomenon and its diverse applications in process industry It covers the full spectrum of techniques for chemical separations and extraction Beginning with molecular diffusion in gases liquids and solids within a single phase the mechanism of inter phase mass transfer is explained with the help of several theories The separation operations are explained comprehensively in two distinct ways stage wise contact and continuous differential contact The primary design requirements of gas liquid equipment are discussed The book provides a detailed discussion on all individual gas liquid liquid liquid solid gas and solid liquid separation processes The students are also exposed to the underlying principles of the membrane based separation processes The book is replete with real applications of separation processes and equipment Problems are worked out in each chapter Besides problems with answers short questions multiple choice questions with answers are given at the end of each chapter The text is intended for a course on mass transfer transport and separation processes prescribed for the undergraduate and postgraduate students of chemical engineering
