Chemistry Atoms First 2e Paul Flowers,Klaus Hellmut Theopold,Richard Langley,Edward J. Neth,William R. Robinson,2019-02-14 Chemistry Atoms First 2e is a peer reviewed openly licensed introductory textbook produced through a collaborative publishing partnership between OpenStax and the University of Connecticut and UConn Undergraduate Student Government Association This text is an atoms first adaptation of OpenStax Chemistry 2e The intention of atoms first involves a few basic principles first it introduces atomic and molecular structure much earlier than

the traditional approach and it threads these themes through subsequent chapters This approach may be chosen as a way to delay the introduction of material such as stoichiometry that students traditionally find abstract and difficult thereby allowing students time to acclimate their study skills to chemistry Additionally it gives students a basis for understanding the application of quantitative principles to the chemistry that underlies the entire course It also aims to center the study of chemistry on the atomic foundation that many will expand upon in a later course covering organic chemistry easing that transition when the time arrives
