Topic: Psychology | Words: 2113 | Pages: 7

For my observation, I have viewed video recordings of three separate groups of children being engaged in play. The first video seems to show two caretakers playing with two children, using toy balls and cubes. The second, imaginative play video, contains three toddlers playing with the caretaker who is talking to them in both English and Spanish. The third video shows a group of at least 4 children engaging in role-playing activities. I have watched these videos on an evening, and will be using them to analyze, and measure the children's behavior and level of development.

For the 3 to the 8-month group, I will be primarily discussing the boy in a blue onesie, who is featured prominently in the video. The infant seems to be in a good physical condition, using the strength of his arms and body to support himself in a semi-crawling position. He is able to move around the playmat, as well as sit. Another prominent signifier of his development is the boy's ability to grasp objects. He can be seen taking hold of the green cube and pushing the red one away.

In terms of cognitive and linguistic development, the boy also seems to be quite adept. Firstly, he is seen actively interacting with the toys around him, clearly engaging in some form of play, reaching for objects that he wants to play with, and keeping them to himself. Furthermore, as seen by the interaction with the caretaker, the boy recognizes his own name being called and pays attention. In addition to that, he is also seen following toys and other objects with his gaze, as well as mouth on them.

As for social and cognitive development, the child in a blue onesie seems

Observing Children in Their Natural Worlds

Anthony D. Pellegrini, Frank Symons, John Hoch, 2014-04-08 This second edition updates the methods based on new technologies updates and increases the number of examples and reorganizes so the theoretical material is up front The author's decisions were guided by having used the first edition in classes at two universities Consequently he received feedback on the book from a variety of different perspectives from groups of very conscientious and competent students and from colleagues around the world who have used the book By consensus the most popular aspect of the first edition was the organization of the book where the student researcher is guided through conceptualizing designing implementing and writing up the research project This basic organization is the same as in the first edition however within this organizational frame things have changed The discussion of the place of direct observational methods in relation to different qualitative and quantitative research traditions has been kept but expanded Discussions of the use of direct observations in naturalistic settings drawing from research methods in ethology

and ethnography and in more contrived settings drawing from experimental psychology are extended Relatedly an extended discussion has been added on theories of science guiding different research assumptions In addition sections of validity reliability and the ethics surrounding the research enterprise are also expanded These constructs are not specific to observational methods but relevant to the general research process In revised chapters in these areas the author provides grounding in the general concepts and then draws more specific focus to observational methods The extended discussion of ethics is important since issues related to who gets authorship on papers how to complete Institutional Review Board forms and honesty in reporting findings are all issues that face both junior and senior researchers alike Practical issues of writing research papers are expanded in this edition providing discussions of writing both review and empirical articles Lastly a new and extensive chapter on using technology in direct observational methods has been added which reviews the available hardware and software in direct observational methods
