Closed Loop Motion Control For Mobile Robotics:

Motion Control for Dynamic Mobile Robots Hong Zhang, 2000 In this thesis we present research results on sensor based motion planning and nonlinear control for mobile robotic systems In sensor based motion planning we use ideas from game theory to deal with the uncertainties accompanying real sensors and moving obstacles We show that this idea can be successfully applied to both open loop and closed loop motion planning and control algorithms With the emphasis on the use of a vision sensor we extend the concept of sensor based motion planning to motion planning in the image plane which can help us to bypass the calibration errors associated with vision based control and achieve faster response speeds Meanwhile we address the effect of dynamics in vision based motion control or visual servoing and expanded our ability to control a dynamic robotic system such as the blimp robot *Adaptive Motion Control of Mobile Robots* Liqiang Feng, 1992 **Robot Motion and Control 2007** Krzysztof R.
