Stable Adaptive Neural Network Control:

Stable Adaptive Neural Network Control S.S. Ge, C.C. Hang, T.H. Lee, Tao Zhang, 2013-03-09 Recent years have seen a rapid development of neural network control techniques and their successful applications. Numerous simulation studies and actual industrial implementations show that artificial neural network is a good candidate for function approximation and control system design in solving the control problems of complex nonlinear systems in the presence of different kinds of uncertainties. Many control approaches, methods, reporting inventions and control applications within the fields of adaptive control, neural control and fuzzy systems have been published in various books, journals and conference proceedings. In spite of these remarkable advances in neural control field due to the complexity of nonlinear systems, the present research on adaptive neural control is still focused on the development of fundamental methodologies. From a theoretical viewpoint, there is in general lack of a firmly mathematical basis in stability, robustness and performance analysis of neural network adaptive control systems. This book is motivated by the need for systematic design approaches for stable adaptive control using approximation based techniques. The main objectives of the book are to develop stable adaptive neural control strategies and to perform transient performance analysis of the resulted neural control systems analytically. Other linear in the parameter function approximators can replace the linear in the parameter neural networks in the controllers presented in the book without any difficulty which include polynomials, splines, fuzzy systems, wavelet networks among others. Stability is one of the most important issues being concerned if an adaptive neural network controller is to be used in practical applications.

Stable Adaptive Neural Network Control S. S. Ge, C. C. Hang, T. H. Lee, 2014-01-15 *Radial Basis Function (RBF) Neural Network Control for Mechanical Systems* Jinkun Liu, 2013-01-26 Radial Basis Function (RBF) Neural Network Control for Mechanical Systems is motivated by the need for systematic design approaches to stable adaptive control system design using neural network approximation based techniques. The main objectives of the book are to introduce the concrete design methods and MATLAB simulation of stable adaptive RBF neural control strategies. In this book a broad range of implementable neural network control design methods for mechanical systems are presented such as robot manipulators, inverted pendulums, single link flexible joint robots, motors etc. Advanced neural network controller design methods and their stability analysis are explored. The book provides readers with the fundamentals of neural network control system design. This book is intended for the researchers in the fields of neural adaptive control, mechanical systems, Matlab simulation, engineering design, robotics and automation. Jinkun Liu is a professor at Beijing University of Aeronautics and Astronautics.
