Magazine of Concrete Research, 1951 [Gender-Based Violence in the Global South](#) Ramona Biholar, Dacia L. Leslie, 2024-02-26 This book amplifies the different voices and experiences of those facing gender-based violence (GBV) in the Global South. It explores the localised ways in which marginalised individuals design modes of coping with and address GBV including cultural interpretations and artistic and faith-based expressions. The book examines GBV triggers prevalence and societal impacts while referring to community national and regional mobilisation to deal with the phenomenon in its various manifestations including physical psychological political domestic and public violence. It explores issues related to women's negotiations with the patriarchal underpinnings of GBV the role of the law and history in the perpetuation of GBV the complementary role of culture and faith to legal protection against GBV and access to justice for women and girls. In doing so the book exposes understandings and expressions of GBV as well as methodologies and indigenous initiatives to prevent it through local viable solutions. The book thus challenges the normalisation of GBV in the Global South. Providing concrete and culturally relevant suggestions for challenging ingrained models of gender understandings of violence in the Global South this book will be of interest to academics in the fields of Development Studies Gender Studies Women's Studies Violence and Abuse Studies Human Rights Criminal Law and Socio-Legal Studies.

An Introduction to The History of Structural Concrete FIB - International Federation for Structural Concrete,2023-03-01 History of concrete is more than stories about the past It shows where we are today and where we are able to go Cement is a binder of the whole story The history of concrete and above all that of building and construction research in the broadest sense has been a subject of interest for a very long time As engineers architects or builders there is no need to reinvent the wheel Rather the work of predecessors can be continued Analysis of past abnormalities and understanding of historical developments are worth being used as the basis for the solutions of the future Above all being involved with concrete in today s world means dealing with building materials aesthetic principles construction methods and computational techniques of the past and present so as to identify starting points which can be used in the future to save not only materials and energy but also working time In most ground breaking research projects in the beginning researchers found themselves looking into the past Who was the first person to conduct research on a topic What is the stage of development today What questions remain unanswered This approach is nothing extraordinary but rather self evident and has been the guiding force behind the evolution of structures materials and methods of construction An inevitable sense of admiration arises not only when we look at structures but also when we look into the story of their builders who showed great courage by bringing their ideas to life one structure at a time
