Storage Systems Alexander Thomasian,2021-10-13
Storage Systems Organization Performance Coding Reliability and Their Data Processing was motivated by the 1988 Redundant Array of Inexpensive Independent Disks proposal to replace large form factor mainframe disks with an array of commodity disks Disk loads are balanced by striping data into strips with one strip per disk and storage reliability is enhanced via replication or erasure coding which at best dedicates k strips per stripe to tolerate k disk failures Flash memories have resulted in a paradigm shift with Solid State Drives SSDs replacing Hard Disk Drives HDDs for high performance applications RAID and Flash have resulted in the emergence of new storage companies namely EMC NetApp SanDisk and Purestorage and a multibillion dollar storage market Key new conferences and publications are reviewed in this book The goal of the book is to expose students researchers and IT professionals to the more important developments in storage systems while covering the evolution of storage technologies traditional and novel databases and novel sources of data We describe several prototypes FAWN at CMU RAMCloud at Stanford and Lightstore at MIT Oracle s Exadata AWS Aurora Alibaba s PolarDB Fungible Data Center and author s paper designs for cloud storage namely heterogeneous disk arrays and hierarchical RAID Surveys storage technologies and lists sources of data measurements text audio images and video Familiarizes with paradigms to improve performance caching prefetching log structured file systems and merge trees LSMs Describes RAID organizations and analyzes their performance and reliability Conserves storage via data compression deduplication compaction and secures data via encryption Specifies implications of storage technologies on performance and power consumption Exemplifies database parallelism for big data analytics deep learning via multicore CPUs GPUs FPGAs and ASICs e.g Google s Tensor Processing Units

Theorization and Representations in Linguistics Viviane Arigne,Christiane Migette,2018-11-07 This book addresses some issues of theorization in linguistics having to do with the systems of representation used in linguistics and the relation between linguistics and cognition The essays gathered in the first part question the very concept of metalanguage comparing the metalanguage used in formalised languages and that of natural languages or examining Chomsky s theory of mental representations in relation to semantic description and analysis In the same line of thought another contribution endeavours to show how the notational system of a linguistic theory is part and parcel of both conceptualisation and theorisation in an analysis based on the early development of phonetics and phonology The second part of the volume studies the relations between linguistics and cognition seen under different angles The first study examines how the relation between cognitive linguistics and other disciplines is conducive to confusion and divergences in the interpretation of the terminology and is followed by a discussion of the origins and development of prototype theory in psychology and its transfer in linguistics by cognitive semanticists The last two chapters study how mental operations are expressed in language analysing the cognitive processes of deductive vs abductive inference on the

one hand and the metarepresentation of utterance acts by assertive shell nouns on the other hand
