

### Lab exercise 5 Questions:

1. Twenty-four hours after inoculating an agar plate with a pure bacterial culture, you notice that there are mostly large, grey circular colonies on the surface of the agar. However, there are also several small, circular yellow colonies as well. What is your interpretation of these results? What do you conclude happened here?

---

---

---

2. You are provided an agar plate with which to inoculate an unknown bacterial sample. The plate should have been sterile, but when you open the lid you see moderately sized fuzzy growth (similar to what is shown to the right). What category of microorganism is contaminating your plate? What is the best course of action at this point?

---

---

---

---

---

3. Twenty-four hours after inoculating an agar plate with an unknown bacterial sample, you notice that all of the colonies are round, large and yellow in color. Based on this observation you conclude that your unknown species is producing a yellow pigment. Can you ALWAYS rely on this yellow pigment characteristic to identify this particular bacterial species? Why or why not?
