Data Abstraction and Problem Solving with C++ Frank M. Carrano,Paul Helman,Robert Veroff,1998 Focusing on data abstraction and data structures the second edition of this very successful book continues to emphasize the needs of both the instructor and the student The book illustrates the role of classes and abstract data types ADTs in the problem solving process as the foundation for an object oriented approach Throughout the next the distinction between specification and implementation is continually stressed The text covers major applications of ADTs such as searching a flight map and performing an event driven simulation It also offers early extensive coverage of recursion and uses this technique in many examples and exercises Overall the lucid writing style widespread use of examples and flexible coverage of material have helped make this a leading book in the field Book Jacket **Allocation of Forces, Fires, and Effects Using Genetic Algorithms**

Christopher G. Pernin,2008 This report is part of a project titled Representing the allocation of forces fires and effects using genetic algorithms The project strives to develop appropriate representations of intelligence driven command and control for use in U S Army constructive simulations This report explores a method for representing sophisticated command and control planning algorithms that specifically concern maneuver planning and allocation schemes The report describes a model developed within the RAND Corporation that uses genetic algorithms to compute the allocation of forces fires and effects with detailed look ahead representations of enemy conduct
