Evaluating the Sustainability Performance of Alternative Residential Building Designs Using BIRDS Low-Energy Residential Database Joshua Kneifel,2016 The recent release of Building Industry Reporting and Design for Sustainability BIRDS v3 0 incorporated the energy environmental and cost measurements for 240 000 residential building designs for a 2 story colonial house based on the NIST Net Zero Energy Residential Test Facility NZERTF located in Gaithersburg MD for study period lengths ranging from 1 year to 40 years Focusing on a single location allows for consideration of incremental building energy efficiency improvements instead of the suite of energy efficiency requirements specified in the International Energy Conservation Code IECC as was the focus of the residential database incorporated in BIRDS v2 0 Building design specifications included in the database span the five most recent IECC editions through net zero energy performance Additional options not included in previous versions of BIRDS are input alternatives for discount rate home loan financing and construction quality for a total of 8 cases The 240 000 designs across 8 cases sets of assumptions and 40 study periods allows for comparisons across over 75 million records to determine the effects of improving building energy efficiency on the overall sustainability performance The purpose of this study is to utilize similar methodology as that used in prior analysis of BIRDS databases to analyze the BIRDS low energy residential database Our analysis will entail making comparisons between a Maryland residential code compliant design based on 2015 IECC serving as our baseline and a series of alternative designs with varying levels of energy efficiency based on energy economic and environmental performance Findings from this study will shed light on the effects of incremental improvements in residential building energy efficiency as well as the effects of varying the investor s time horizon and other assumptions on overall sustainability performance in terms of energy efficiency life cycle assessment score coupled with life cycle cost considerations **Modular Construction Using Light Steel Framing** M.T.
