Ziemer,W. H. Tranter,2002 Sections on important areas such as spread spectrum cellular communications and orthogonal frequency division multiplexing are provided Computational examples are included illustrating how to use the computer as a simulation tool thereby allowing waveforms spectra and performance curves to be generated Overviews of the necessary background in signal system probability and random process theory required for the analog and digital communications topics covered in the book A Baseband, Impulse Ultra-wideband Transceiver Front-end for Low Power Applications Ian David O'Donnell,2006 Interest in indoor wireless communications has been increasing In addition to high throughput WLAN systems such as 802 11a b g n attention is also being focused on lower rate short distance systems such as Bluetooth and Zigbee These low rate radios are being proposed for a variety of applications including automation security smart toys remote sensing control asset tracking and as a replacement for computer peripheral wires While not demanding aggressive throughput these radios do require low cost power efficient operation and optionally the ability to perform ranging Unfortunately currently reported radios are up to an order of magnitude away from these power and cost targets or do not support ranging However a recent ruling from the FCC has opened up nearly 8GHz of unlicensed spectrum from dc to 960MHz and from 3 1GHz to 10 6GHz for ultra wideband UWB deployment One attractive method of UWB signaling that seems suited to a low power highly integrated implementation communicates with short pulses on the order of a nanosecond that spread energy over at least 500MHz of

bandwidth Termed impulse UWB the baseband nature of this signaling promises low cost and low power consumption through design simplicity pulsed or duty cycled operation and a mostly digital implementation The benefits of this approach are balanced by the risk of jamming from in band interference of stricter sampling and gain constraints and of increased digital complexity This dissertation presents the system exploration specification design and demonstration of a low power highly integrated flexible baseband impulse ultra wideband transceiver front end *ISDN Systems* Pramode K.
