Decision Making & Problem Solving Strategies : [Summary]. ,2017 **Problem-Solving and Decision-Making Strategies** Sorin Dumitrascu,2017-12-03 Everyone encounters a wide range of difficulties mishaps and obstacles You can think of a problem as

anything from a mild irritation like a sticky keyboard to a complete disaster that puts your job or even your life at risk A problem is a question or situation that causes doubt or perplexity or presents a difficulty It s something that needs to be corrected or overcome so you can achieve a desired state A problem often requires a unique or creative solution In other words you have a problem when you have a goal but can t readily see how to reach it when you have to think plan and devise suitable actions to solve the problem and achieve the goal Barriers to achieving your goals can vary widely in kind and importance Your problem might be as small as spilling coffee on your tie right before going into an important business meeting Or it could be much more serious say if the laptop your presentation was on got stolen and you didn t have a backup But if you know just what to do in response to a problem it s no longer a real problem This is because there s no doubt or complexity involved for you the path of action you need to take to achieve your goal is clear Problems come in two basic varieties The first is an unexpected disruption to the normal course of things For example your supplier fails to deliver crucial items or your car breaks down on your way to a conference You may or may not know what caused the disruption The second type is a gap between your current state and a desired state or goal If you aren t sure how to bridge that gap you have a problem For example you might want to find ways to meet a new consumer need Or you might want to improve your own efficiency in terms of managing your time meeting sales targets or designing products Everyone needs to solve problems from the trivial to the life threatening at some point
