Separation Technologies for Minerals, Coal, and Earth Resources Courtney Young, Gerald H. Luttrell, 2012 This book is an authoritative digest of the latest developments in the mineral processing industry Dozens of authors share their insights on how practitioners can develop earth resources more economically while simultaneously addressing vital factors ranging from sustainability to environmental stewardship The book examines coal processing surface forces and hydrophobicity process improvements and environmental controls dewatering and drying gravity separations industrial minerals flotation base metal flotation flotation equipment and practice process reagents magnetic and electrostatic separations modeling and process control and resource engineering Important current issues such as gas hydrates oil sands secondary materials metals and waste and process waters are also discussed

**Open-Ended Problems** James Patrick Abulencia, Louis Theodore, 2015-03-27 This is a unique book with nearly 1000 problems and 50 case studies on open ended problems in every key topic in chemical engineering that helps to better prepare chemical engineers for the future The term open ended problem basically describes an approach to the solution of a problem and or situation for which there is not a unique solution The Introduction to the general subject of open ended problems is followed by 22 chapters each of which addresses a traditional chemical engineering or chemical engineering related topic Each of these

chapters contain a brief overview of the subject matter of concern e.g thermodynamics which is followed by sample open ended problems that have been solved by the authors employing one of the many possible approaches to the solutions This is then followed by approximately 40-45 open ended problems with no solutions although many of the authors solutions are available for those who adopt the book for classroom or training purposes A reference section is included with the chapter s contents Term projects comprised of 12 additional chapter topics complement the presentation This book provides academic industrial and research personnel with the material that covers the principles and applications of open ended chemical engineering problems in a thorough and clear manner Upon completion of the text the reader should have acquired not only a working knowledge of the principles of chemical engineering but also and more importantly experience in solving open ended problems What many educators have learned is that the applications and implications of open ended problems are not only changing professions but also are moving so fast that many have not yet grasped their tremendous impact The book drives home that the open ended approach will revolutionize the way chemical engineers will need to operate in the future

Process Dynamics B. Wayne Bequette,1998 Suitable as a text for Chemical Process Dynamics or Introductory Chemical Process Control courses at the junior senior level This book aims to provide an introduction to the modeling analysis and simulation of the dynamic behavior of chemical processes **Crystallization from Solutions and Melts** American Institute of Chemical Engineers,1969 *Handbook of Natural Gas Transmission and Processing* Saeid Mokhatab,William A. Poe,2012-07-02 Acquire the tools and techniques that will help meet the world s growing natural gas demand *Handbook of Natural Gas Transmission and Processing 2nd Edition* gives engineers and managers complete coverage of natural gas transmission and processing in the most rapidly growing sector to the petroleum industry Emphasizing the practical aspects of natural gas production over the theoretical the authors provide a unique discussion of new technologies that are energy efficient and environmentally appealing at the same time This 2nd edition examines ways to select the best processing route for optimal design of gas processing plants and includes three new chapters on dynamics of process controls process modeling and simulation and optimal design of gas processing plants Both Chapter 7 Acid Gas Treating and Chapter 9 Natural Gas Dehydration are heavily revised The objective of this work is to provide plant designers and owners operators methods to decrease construction costs and total cost of ownership while addressing reliability and availability **Chemical Engineering Dynamics, Includes CD-ROM** John Ingham,2007 In this book the modelling of dynamic chemical engineering processes is presented in a highly understandable way using the unique combination of simplified fundamental theory and direct hands on computer simulation The mathematics is kept to a minimum and yet the nearly 100 examples supplied on www.wiley.vch.de illustrate almost every aspect of chemical engineering science Each example is described in detail including the model equations They are written in the modern user friendly simulation language Berkeley Madonna which can be run on both Windows PC and Power Macintosh computers Madonna solves models comprising many ordinary

differential equations using very simple programming including arrays It is so powerful that the model parameters may be defined as sliders which allow the effect of their change on the model behavior to be seen almost immediately Data may be included for curve fitting and sensitivity or multiple runs may be performed The results can be seen simultaneously on multiple graph windows or by using overlays The resultant learning effect of this is tremendous The examples can be varied to fit any real situation and the suggested exercises provide practical guidance The extensive experience of the authors both in university teaching and international courses is reflected in this well balanced presentation which is suitable for the teacher the student the chemist or the engineer This book provides a greater understanding of the formulation and use of mass and energy balances for chemical engineering in a most stimulating manner This book is a third edition which also includes biological environmental and food process examples

**Production of Calcium Magnesium Acetate (CMA) from Dilute Aqueous Solutions of Acetic Acid** Daniel B. Leineweber,1992 Review of Modern Engineering Solutions for the Industry Zhen Yu Du,Bin Liu,2012-10-26 Selected peer reviewed papers from the 2012 International Conference on Mechatronic Systems and Automation Systems MSAS 2012 July 21 2012 Wuhan China Scientific and Technical Aerospace Reports ,1979 Coordinated Computing Robert E. Filman,Daniel P. Friedman,1984 This is one of the first books that attempts to discuss distributed programming It covers a wide spectrum of distributed programming models and makes a relative comparison of various message passing models concurrent languages and distributed programming languages The authors treatment of exchange functions which is not widely available otherwise discusses some of the issues of realtime programming languages After a brief review of computation theory programming languages synchronization mechanisms and primitives of distributed computing the authors discuss seven models for coordinated computing various programming languages and the problems of organizing distributed systems Recommended for those interested in distributed programming or as a second level course on programming languages for graduate students Model Based Process Control International Federation of Automatic Control,1989-03-30 Presented at this workshop were mathematical models upon which process control is based and the practical applications of this method of control within industry case studies include examples from the paper and pulp industry materials industry and the chemical industry among others From these presentations emerged a need for further research and development into process control Containing 19 papers these Proceedings will be a valuable reference work for all those involved in the designing of continuous production processes for industry and for the end user involved in the practical application of process control within their manufacturing process
