Verwer,2013-04-17 This book deals with numerical methods for solving partial differential equations PDEs coupling advection diffusion and reaction terms with a focus on time dependency A combined treatment is presented of methods for hyperbolic problems thereby emphasizing the one way wave equation methods for parabolic problems and methods for stiff and non stiff ordinary differential equations ODEs With regard to time dependency we have attempted to present the algorithms and the discussion of their properties for the three different types of differential equations in a unified way by using semi discretizations i e the method of lines whereby the PDE is transformed into an ODE by a suitable spatial discretization In addition for hyperbolic problems we also discuss discretizations that use information based on characteristics Due to this combination of methods this book differs substantially from more specialized textbooks that deal exclusively with numerical methods for either PDEs or ODEs We treat integration methods suitable for both classes of problems This combined treatment offers a clear advantage On the one hand in the field of numerical ODEs highly valuable methods and results exist which are of practical use for solving time dependent PDEs something which is often not fully exploited by numerical PDE researchers Although many problems can be solved by Euler s method or the Crank Nicolson method better alternatives are often available which can significantly reduce the computational effort needed to solve

Quantitative Chemical Analysis and Inorganic Preparations Robert Martin Caven, 1927 *Sparse Polynomial Approximation of High-Dimensional Functions* Ben Adcock, Simone Brugiapaglia, Clayton G. Webster, 2022-02-16 Over seventy years ago Richard Bellman coined the term the curse of dimensionality to describe phenomena and computational challenges that arise in high dimensions These challenges in tandem with the ubiquity of high dimensional functions in real world applications have led to a lengthy focused research effort on high dimensional approximation that is the development of methods for approximating functions of many variables accurately and efficiently from data This book provides an in depth treatment of one of the latest installments in this long and ongoing story sparse polynomial approximation methods These methods have emerged as useful tools for various high dimensional approximation tasks arising in a range of applications in computational science and engineering It begins with a comprehensive overview of best s term polynomial approximation theory for holomorphic high dimensional functions as well as a detailed survey of applications to parametric differential equations It then describes methods for computing sparse polynomial approximations focusing on least squares and compressed sensing techniques *Sparse Polynomial Approximation of High Dimensional Functions* presents the first comprehensive and unified treatment of polynomial approximation techniques that can mitigate the curse of dimensionality in high dimensional approximation including least squares and compressed sensing It develops main concepts in a mathematically rigorous manner with full proofs given wherever possible and it contains many numerical examples each accompanied by downloadable code The authors provide an extensive bibliography of over 350 relevant references with an additional annotated bibliography available on the book s companion website www.sparse-hd-book.com This text is aimed at graduate students postdoctoral fellows and researchers in mathematics computer science and engineering who are interested in high dimensional polynomial approximation techniques **Calendar ...** University College, Galway, 1895
