Computers and the Teaching of Writing in American Higher Education, 1979-1994 Gail E. Hawisher, 1996 This book is a history composed of histories Its particular focus is the way in which computers entered and changed the field of composition studies a field that defines itself both as a research community and as a community of teachers This may have a somewhat sinister suggestion that technology alone has agency but this history made of histories is not principally about computers It is about people the teachers and scholars who have adapted the computer to their personal and professional purposes From the authors perspectives change in technology drives changes in the ways we live and work and we agents to a degree in control of our own lives use technology to achieve our human purposes

REVIEW This book reminds those of us now using computers to teach writing where we have been and it brings those who are just entering the field up to date More important it will inform administrators curriculum specialists and others responsible for implementing the future uses of technology in writing instruction
