Statistical Consulting Javier Cabrera, Andrew McDougall, 2013-04-17. The motivation for this book arose from the statistical consulting course that we have taught regularly for several years. In that course we focus on the themes: Understanding the statistical consulting process, Developing effective communication skills, Obtaining experience through case studies. In reality there is no substitute for consulting directly with a client and for this interaction to be effective, good communication skills are essential. Unfortunately, this aspect of a statistician's training is often neglected and statistics graduates have little choice but to learn these skills on the job. One of the purposes of this book is to address this need. Statistical consulting occurs in a diverse range of environments and for tackling real-life statistical problems the statistician needs to have a strong interest in the scientific method. History itself provides the best examples for developing this interest and so we begin with a brief historical voyage in Chapter 1. There is no time like the present of course and in the remainder of this chapter we describe some of the environments in which statistical consulting plays a major role. A detailed discussion on verbal and written communication skills that will be required in a consulting environment is presented in Chapter 2. **Quaestiones Mathematicae**, 2001
