4.1 Numerical Differentiation

The derivative of the function f at x_0 is

$$f'(x_0) = \lim_{h \rightarrow 0} \frac{f(x_0 + h) - f(x_0)}{h}.$$

This formula gives an obvious way to generate an approximation to $f'(x_0) = \frac{f(x_0 + h) - f(x_0)}{h}$

Computational Methods in Physics Simon Širca, Martin Horvat, 2025-04-01 This textbook provides a compendium of numerical methods to assist physics students and researchers in their daily work. It carefully considers error estimates, stability, and convergence issues, the choice of optimal methods and techniques to increase program execution speeds. The book supplies numerous examples throughout the chapters that are concluded by more comprehensive problems with a strong physics background. Instead of uncritically employing modern black box tools, the readers are encouraged to develop a more ponderous and skeptical approach. This revised and expanded edition now includes a new chapter on numerical integration and stable differentiation, as well as fresh material on optimal filtering, integration of gravitational many body problems, computation of Poincaré maps, regularization of orbits, singular Sturm-Liouville problems, techniques for time evolution, and spatial treatment of semi-infinite domains in spectral methods and phase retrieval. It also brings updated discussions of algebraic problems involving sparse matrices and of high resolution schemes for partial differential equations.

Computational Techniques for Process Simulation and Analysis Using MATLAB® Niket S. Kaisare, 2017-09-18 MATLAB has become one of the prominent languages used in research and industry and is often described as the language of technical computing. The focus of this book will be to highlight the use of MATLAB in technical computing or more specifically in solving problems in Process Simulations. This book aims to bring a practical approach to expounding theories, both numerical aspects of stability and convergence, as well as linear and nonlinear analysis of systems. The book is divided into three parts which are laid out with a Process Analysis viewpoint. First part covers system dynamics followed by solution of linear and nonlinear equations including Differential Algebraic Equations (DAE) while the last part covers function approximation and optimization. Intended to be an advanced level textbook for numerical methods simulation and analysis of process systems and computational programming, it covers following key points: Comprehensive coverage of numerical analyses based on MATLAB for chemical process examples. Includes analysis of transient behavior of chemical processes. Discusses coding hygiene, process animation, and GUI exclusively. Treatment of process dynamics, linear stability, nonlinear analysis, and function approximation through contemporary examples. Focus on simulation using MATLAB to solve ODEs and PDEs that are frequently encountered in process systems.

Fundamentals of Computational Methods for Engineers Md. Masud Rana, Wei Xu, Youguang Guo, 2022-06-01 This textbook bridges the gap between introductory and advanced numerical methods for engineering students. The book initially introduces readers to numerical methods before progressing to linear and nonlinear equations. Next, the book covers the topics of interpolation, curve fitting, and approximation, integration, differentiation, and differential equations. The book concludes with a chapter on advanced mathematical analysis which explains methods for finite difference, method of moments, and finite elements. The book introduces readers to key concepts in engineering such as error analysis, algorithms, applied mathematics, with the goal of giving an understanding of how to solve

engineering problems using computational methods Each of the featured topics is explained with sufficient detail while retaining the usual introductory nuance This blend of beginner friendly and applied information along with reference listings makes the textbook useful to students of undergraduate and introductory graduate courses in mathematics and engineering
