Henley, Edward Marshall Rosen, 1969 **Waste Management and Resource Recovery** Charles R. Rhyner, Leander J. Schwartz, Robert B. Wenger, Mary G. Kohrell, 2017-12-14 This book provides a basic understanding of waste management problems and issues faced by modern society Scientific technical and environmental principles are emphasized to illustrate the processes of municipal and industrial solid wastes and liquid wastes and the nature of impacts resulting from waste dispersal and disposal in the environment Economic social legal and political aspects of waste management are also addressed Environmental issues and concerns receive thorough coverage in discussing waste reduction resource recovery and efficient and practical waste disposal systems Other specific topics include recycling physical and chemical processing the biological treatment of waste solids incineration pyrolysis and energy recover hazardous wastes and landfill management The role of government and other institutions in waste management and resource recovery matters is also detailed Discussion questions worked examples and end of chapter problems reinforce important concepts Waste Management and Resource Recovery is particularly suitable as a text in waste management courses in environmental science or engineering programs It also works well as a reference for practitioners in the waste management field **Incineration of Municipal and Hazardous Solid Wastes** David A. Tillman, 2012-12-02 Incineration of Wastes address the developments in the application of the combustion process to the incineration of solid municipal and hazardous wastes and examines its fundamental scientific basis The text covers topics such as the generation and management of hazardous wastes the fuel properties and process of municipal solid waste combustion and mass burn systems for the combustion of municipal solid waste its case studies and the manipulation of its processes Also covered are topics such as the production and combustion of refuse derived fuels the fundamentals of hazardous solid waste combustion and permanent solid hazardous waste incineration systems The book is recommended for sanitation engineers and scientists who would like to know more about the use of municipal solid wastes as an energy source through the process of incineration **Handbook on Material and Energy Balance Calculations in Metallurgical Processes** H. Alan Fine, Gordon Geiger, 1993 This book approaches the subject of material and energy balances from two directions First it emphasizes the fundamental principles of the conservation of mass and energy and the consequences of these two principles Second it applies the techniques of computational chemistry to materials processing and introduces new software developed by the author especially for material and heat balances The third edition reflects the changes in the professional engineer s practice in the last 30 years reflecting the dramatic shift away from metallurgical engineering and the extractive industry towards materials engineering A large and growing number of recent graduates are employed in such fields as semiconductor processing environmental engineering and the production and processing of advanced and exotic materials for aerospace electronic and structural applications The advance in computing power and software for the desktop

computer has significantly changed the way engineers make computations and the biggest change comes from the computational approach used to solve problems The spreadsheet program Excel is used extensively throughout the text as the main computational engine for solving material and energy balance equations and for statistical analysis of data The use of Excel and the introduction of the add in programs enables the study of a range of variables on critical process parameters and emphasis is placed on multi device flowsheets with recycle bypass and purge streams whose material and heat balance equations were previously too complicated to solve by the normally used hand calculator The Excel based program FlowBal helps the user set up material and heat balance equations for processes with multiple streams and units
