Evolution

Q: How can populations evolve to form new species?

17.1 How do genes make evolution possible?

WHAT I KNOW

SAMPLE ANSWER: There are different variations of the same gene.

WHAT I LEARNED

SAMPLE ANSWER: Evolution occurs when the allele frequency in the gene pool of a population changes over time.

17.2 What makes a population's gene pool change?

SAMPLE ANSWER: Over time useful traits (and the genes that control them) accumulate in a population.

SAMPLE ANSWER: Genetic changes can affect the number and types of possible phenotypes organisms in a population can have. These changes provide the variation that populations need to evolve.

17.3 How do new species form?

SAMPLE ANSWER: The genome of a species changes enough that it becomes a new species.

SAMPLE ANSWER: Speciation sometimes occurs when populations become reproductively isolated.

17.4 What can genes tell us about an organism's evolutionary history?

SAMPLE ANSWER: Some species' genomes are very similar. These species are closely related. The opposite is true for species with very different genomes.

SAMPLE ANSWER: A molecular clock uses mutation rates in DNA to estimate the time that two species have been evolving independently.

These two volumes consist of about 350 papers in three main areas of artificial intelligence and neurocomputing namely 1 modelling the brain 2 methods of soft computing 3 applications of intelligent information systems. The materials contained in two volumes emphasise the importance of connectionist based information systems which use neural networks and other methods to achieve intelligent information processing such as speech recognition and language understanding pattern recognition vision learning and adaptation planning and decision making. Some of the methods of the connectionist based information systems directly model the physical organisation of the human brain which is the area of brain like computing. Other methods model cognitive aspects of human behaviours which is the area of cognitive engineering. A third group of methods are based on statistical and probability theory. All these methods are presented and applied on concrete problems. Many connectionist based systems are described in different papers of the two volumes. These two volumes are a comprehensive and up to date guide to the diverse topics of neuro computing artificial intelligence and knowledge engineering. *Student Study Guide for Biology* [by] Campbell/Reece/Mitchell Martha R.
