A. CHEMICAL BASIS FOR GENETICS. It wasn't until modern times that scientists began to understand the chemical makeup of genes and chromosomes. In the 1940's and 1950's experiments showed that genes, the basic units of heredity, are made up of the chemical compound **DNA (deoxyribonucleic acid)**. DNA is a large complex molecule found in high concentrations in the nucleus of the cell. It is responsible for passing genetic information from generation to generation. DNA also controls the manufacture of enzymes. Enzymes control cellular activity.
