7 1 Darwin S Theory:

The Game of Contradictions Sven-Eric Liedman,2022-12-19 What is the nature of the laws that Marx and Engels sought to formulate for the development of capitalism How to understand and judge Engels s attempt to formulate a general philosophy and worldview These are the questions highlighted in this magnificent work that situates Marx and Engels s writing against the background of the entire nineteenth century world of scientific problems from physics to historiography One of the major contributions to scholarship on Marx Engels and nineteenth century science Liedman s work is here presented in English translation and with a new preface by the author

Epigenetic Inheritance and Evolution Eva Jablonka,Marion J. Lamb,1995 Does the inheritance of acquired characteristics play a significant role in evolution In this book Eva Jablonka and Marion J Lamb attempt to answer that question with an original provocative exploration of the nature and origin of hereditary variations Starting with a historical account of Lamarck s ideas and the reasons they have fallen in disrepute the authors go on to challenge the prevailing assumption that all heritable variation is random and the result of variation in DNA base sequences They also detail recent breakthroughs in our understanding of the molecular mechanisms underlying inheritance including several pathways not envisioned by classical population genetics and argue that these advances need to be more fully incorporated into mainstream evolutionary theory Throughout the book offers a new look at the evidence for and against the heritability of environmentally induced changes and addresses timely questions about the importance of non Mendelian inheritance A glossary and extensive list of references round out the book Urging a reconsideration of the present DNA centric view prevalent in the field Epigenetic Inheritance and Evolution will make fascinating and important reading for students and researchers in evolution genetics ecology molecular biology developmental biology and the history and philosophy of science
