Robotics Goes MOOC Bruno Siciliano, 2025-06-08 It is often read in the media that AI and Robotics are the

primary cause of technology unemployment AI and machine learning techniques are expected to take over lower level tasks while humans can spend more time with higher level tasks In perspective it can be said that jobs requiring boring cognitive tasks or repeatable and dangerous physical tasks will be considerably shredded by automation thanks to the wide adoption of AI Robotics technology to replace humans while jobs requiring challenging cognitive tasks or unstructured physical tasks will be suitably re engineered with the progressive introduction of AI Robotics technology to assist humans From the discussion above it should be clear that in a world populated by humans and robots issues arise that go beyond engineering and technology due to the impact resulting from the use of robots in various application scenarios The anthropization of robots cannot ignore the resolution of those ethical legal sociological economic ELSE problems that have so far slowed their spread in our society The final book of the Robotics Goes MOOC project enlightens the impact of using robotic technology in the main fields of application namely industrial robots as in Chapter 1 by Bischoff et al medical robotics as in Chapter 2 by Dario et al aerial robots as in Chapter 3 by Ollero et al orbital robotics as in Chapter 4 by Lampariello underwater robots in Chapter 5 by Antonelli and rescue robots as in Chapter 6 by Murphy The last part is devoted to the open dilemma of using and accepting robots in human co habited environments which is addressed in Chapter 7 on social robotics by Pandey and the very final chapter by Tamburrini on the important issues raised with roboethics

*Decentralized Neural Control: Application to Robotics* Ramon Garcia-Hernandez, Michel Lopez-Franco, Edgar N. Sanchez, Alma y. Alanis, Jose A. Ruz-Hernandez, 2017-02-05 This book provides a decentralized approach for the identification and control of robotics systems It also presents recent research in decentralized neural control and includes applications to robotics Decentralized control is free from difficulties due to complexity in design debugging data gathering and storage requirements making it preferable for interconnected systems Furthermore as opposed to the centralized approach it can be implemented with parallel processors This approach deals with four decentralized control schemes which are able to identify the robot dynamics The training of each neural network is performed on line using an extended Kalman filter EKF The first indirect decentralized control scheme applies the discrete time block control approach to formulate a nonlinear sliding manifold The second direct decentralized neural control scheme is based on the backstepping technique approximated by a high order neural network The third control scheme applies a decentralized neural inverse optimal control for stabilization The fourth decentralized neural inverse optimal control is designed for trajectory tracking This comprehensive work on decentralized control of robot manipulators and mobile robots is intended for professors students and professionals wanting to understand and apply advanced knowledge in their field of work

*The 21st Century Industrial Robot: When Tools Become Collaborators* Maria Isabel Aldinhas Ferreira, Sarah R. Fletcher, 2021-10-25 This book aims to discuss the technical and ethical challenges posed by the present technological framework and to highlight the fundamental role played by human centred design and human factors in the definition of robotic architectures for human robot collaboration The book gives an updated overview of the

most recent robotic technology conceived and designed to collaborate with human beings in industrial working scenarios The technological development of robotics over the last years and the fast evolution of AI machine learning and IoT have paved the way for applications that extend far beyond the typical use of robots performing repetitive tasks in exclusive spaces In this new technological paradigm that is expected to drive the robotics market in the coming years robots and workers will coexist in the same workplace sharing not only this lived space but also the roles and functions inherent to a process of production merging the benefits of automated and manual performing However having robots cooperating in real time with workers responding in a physical psychological and social adequate way requires a human centred design that not only calls for high safety standards regulating the quality of human robot interaction but also demands the robot s fine grained perception and awareness of the dynamics of its surrounding environment namely the behaviours of their human peers their expected actions responses fostering the necessary collaborative efforts towards the accomplishment of the tasks to be executed

*Robotic Fabrication in Architecture, Art and Design 2014* Wes McGee, Monica Ponce de Leon, 2014-03-20

Robotic automation has become ubiquitous in the modern manufacturing landscape spanning an overwhelming range of processes and applications from small scale force controlled grinding operations for orthopedic joints to large scale composite manufacturing of aircraft fuselages Smart factories seamlessly linked via industrial networks and sensing have revolutionized mass production allowing for intelligent adaptive manufacturing processes across a broad spectrum of industries Against this background an emerging group of researchers designers and fabricators have begun to apply robotic technology in the pursuit of architecture art and design implementing them in a range of processes and scales Coupled with computational design tools the technology is no longer relegated to the repetitive production of the assembly line and is instead being employed for the mass customization of non standard components This radical shift in protocol has been enabled by the development of new design to production workflows and the recognition of robotic manipulators as multi functional fabrication platforms capable of being reconfigured to suit the specific needs of a process The emerging discourse surrounding robotic fabrication seeks to question the existing norms of manufacturing and has far reaching implications for the future of how architects artists and designers engage with materialization processes This book presents the proceedings of Rob Arch2014 the second international conference on robotic fabrication in architecture art and design It includes a Foreword by Sigrid Brell Cokcan and Johannes Braumann Association for Robots in Architecture The work contained traverses a wide range of contemporary topics from methodologies for incorporating dynamic material feedback into existing fabrication processes to novel interfaces for robotic programming to new processes for large scale automated construction The latent argument behind this research is that the term file to factory must not be a reductive celebration of expediency but instead a perpetual challenge to increase the quality of feedback between design matter and making
