Introduction to Modeling and Simulation with MATLAB® and Python Steven I. Gordon, Brian Guilfoos, 2017-07-12 Introduction to Modeling and Simulation with MATLAB and Python is intended for students and professionals in science social science and engineering that wish to learn the principles of computer modeling as well as basic programming skills The book content focuses on meeting a set of basic modeling and simulation competencies that were developed as part of several National Science Foundation grants Even though computer science students are much more expert programmers they are not often given the opportunity to see how those skills are being applied to solve complex science and engineering problems and may also not be aware of the libraries used by scientists to create those models The book interleaves chapters on modeling concepts and related exercises with programming concepts and exercises The authors start with an introduction to modeling and its importance to current practices in the sciences and engineering They introduce each of the programming environments and the syntax used to represent variables and compute mathematical equations and functions As students gain more programming expertise the authors return to modeling concepts providing starting code for a variety of exercises where students add additional code to solve the problem and provide an analysis of the outcomes In this way the book builds both modeling and programming expertise with a just in time approach so that by the end of the book students can take on relatively simple modeling example on their own Each chapter is supplemented with references to additional reading tutorials and exercises that guide students to additional help and allows them to practice both their programming and analytical modeling skills In addition each of the programming related chapters is divided into two parts one for MATLAB and one for Python In these chapters the authors also refer to additional online tutorials that students can use if they are having difficulty with any of the topics The book culminates with a set of final project exercise suggestions that incorporate both the modeling and programming skills provided in the rest of the volume Those projects could be undertaken by individuals or small groups of students The companion website at <http://www.intromodeling.com> provides updates to instructions when there are substantial changes in software versions as well as electronic copies of exercises and the related code The website also offers a space where people can suggest additional projects they are willing to share as well as comments on the existing projects and exercises throughout the book Solutions and lecture notes will also be available for qualifying instructors

Mathematical Modeling and Simulation Kai Velten, 2009-06-01 This concise and clear introduction to the topic requires only basic knowledge of calculus and linear algebra all other concepts and ideas are developed in the course of the book Lucidly written so as to appeal to undergraduates and practitioners alike it enables readers to set up simple mathematical models on their own and to interpret their results and those of others critically To achieve this many examples have been chosen from various fields such as biology ecology economics medicine agricultural chemical electrical mechanical and process engineering which are subsequently discussed in detail Based on the author s

modeling and simulation experience in science and engineering and as a consultant the book answers such basic questions as What is a mathematical model What types of models do exist Which model is appropriate for a particular problem What are simulation parameter estimation and validation The book relies exclusively upon open source software which is available to everybody free of charge The entire book software including 3D CFD and structural mechanics simulation software can be used based on a free CAELinux Live DVD that is available in the Internet works on most machines and operating systems

Employing a practical learn by doing approach this first rate text fosters the development of the skills beyond the pure mathematics needed to set up and manipulate mathematical models The author draws on a diversity of fields including science engineering and operations research to provide over 100 reality based examples Students learn from the examples by applying mathematical methods to formulate analyze and criticize models Extensive documentation consisting of over 150 references supplements the models encouraging further research on models of particular interest The lively and accessible text requires only minimal scientific background Designed for senior college or beginning graduate level students it assumes only elementary calculus and basic probability theory for the first part and ordinary differential equations and continuous probability for the second section All problems require students to study and create models encouraging their active participation rather than a mechanical approach Beyond the classroom this volume will prove interesting and rewarding to anyone concerned with the development of mathematical models or the application of modeling to problem solving in a wide array of applications **Introduction to modelling with ecosimpro** Francisco Vázquez, 2010 The simulation of dynamic systems has become a powerful discipline for the design of products in a variety of scientific areas EcosimPro is a modelling and simulation tool for multidisciplinary systems based on differential algebraic equations DAE and discrete events It can be used to model any system in areas such as control fluid thermal mechanical propulsion etc This book contains good introductory material for new users of EcosimPro in the areas of dynamic systems modelling with equations and reuse of existing libraries in the control mechanical electrical and thermal libraries It also provides a good overview of the algorithms used internally to produce robust mathematical models The final chapter is devoted to using EcosimPro models from other environments such as Excel Matlab and C **Probability Modeling and Computer Simulation** Norman S.
