Nutritional Interventions on Age-Related Neurodegenerative Diseases Tiantian Zhang, Zhigang Liu, Yashi Mi, 2023-10-16 As the population grows older strategies that can promote healthy aging and offset the development of age related neurodegenerative diseases are becoming increasingly relevant Consuming a balanced nutritious diet is important for maintaining health especially as individuals age The brain has a high demand for nutrients and nutritional imbalances dampen the structural and functional integrity of the brain critically impacting our cognitive capacities Indeed several lines of evidence suggest that nutritional strategies can reduce the risk of age related neurodegenerative diseases and exhibit potential beneficial effects in delaying the onset of brain diseases and slowing down the progression of some conditions Some studies have shown that nutritional interventions improve cognitive function in patients with AD However the research linking the role of nutritional interventions with age related neurodegenerative diseases is still in the initial stage and has made little progress It is still currently unclear if dietary ingredients can impact and modulate brain aging and neurodegeneration especially the molecular mechanism of nutritional interventions promoting brain health are not yet clear The development of effective nutritional interventions for promoting healthy aging is becoming an emerging and challenging area

**Perspectives on the 'Bilingual Advantage': Challenges and Opportunities** Peter Bright, Roberto Filippi, 2019-09-05

The claim that multilanguage acquisition drives advantages in executive function is currently an issue of vigorous debate in academic literature. Critics argue that evidence for this advantage has been confounded by unsound or questionable methodological practices with some investigators abandoning research in this area altogether indicating either that there is no bilingual advantage or that it is impossible to capture and therefore rule out alternative explanations for group differences. Over the past decade and against this backdrop theory has developed from a relatively narrow focus on inhibitory control to incorporate theory of mind rule based learning reactive and proactive control visuo spatial memory and control of verbal interference in speech comprehension. Most recently authors have claimed that the process of becoming bilingual may also impact on metacognitive abilities. The fundamental issue is whether the limited capacity and goal directed selectivity of our executive system can somehow be enhanced or otherwise profit from the continuous intense competition associated with communicating in multilingual environments. However although this issue has received much attention in academic literature the question of which cognitive mechanisms are most influenced by the enhanced competition associated with multilingual contexts remains unresolved. Therefore rather than dismissing this important topic we advocate a more systematic approach in which the effects of multilinguistic experience are assessed and interpreted across well defined stages of cognitive development. We encourage a broad developmentally informed approach to plotting the trajectory of interactions between multi language learning and cognitive development using a convergence of neuroimaging and behavioral methods across the whole lifespan. Moreover we suggest that the current theoretical framing of the bilingual advantage is simplistic and this issue may limit attempts to identify specific mechanisms most likely to be modulated by multilingual experience. For example there is a tendency in academic literature to treat executive function as an essentially unitary fronto parietal system recruited in response to all manner of cognitive demand yet performance across so called executive function tasks is highly variable and intercorrelations are sometimes low. It may be the case that some higher level mechanisms of executive function remain relatively unaffected while others are more sensitive to multilingual experience and that there may be disadvantages as well as advantages which themselves may be sensitive to factors such as age. In our view there is an urgent need to take a more fine grained approach to this issue so that the strength and direction of changes in diverse cognitive abilities associated with multilanguage acquisition can be better understood. This book compiles work from psychologists and neuroscientists who actively research whether how and the extent to which multilanguage acquisition promotes enhanced cognition or protects against age related cognitive or neurological deterioration. We hope this collection encourages future efforts to drive theoretical progress well beyond the highly simplistic issue of whether the bilingual cognitive advantage is real or spurious.
