Numerical, Symbolic and Statistical Computing for Chemical E Pallab Ghosh, 2018-10-30

NUMERICAL, SYMBOLIC AND STATISTICAL COMPUTING FOR CHEMICAL ENGINEERS USING MATLAB Ghosh, Pallab, 2018-09-01 Numerical analytical and statistical computations are routine affairs for chemical engineers. They usually prefer a single software to solve their computational problems and at present MATLAB has emerged as a powerful computational language which is preferably used for this purpose due to its built-in functions and toolboxes. Considering the needs and convenience of the students, the author has made an attempt to write this book which explains the various concepts of MATLAB in a systematic way and makes its readers proficient in using MATLAB for computing. It mainly focuses on the applications of MATLAB rather than its use in programming basic numerical algorithms. Commencing with the introduction to MATLAB, the text covers vector and matrix computations, solution of linear and non-linear equations, differentiation and integration, and solution of ordinary and partial differential equations. Next, analytical computations using the Symbolic Math Toolbox and statistical computations using the Statistics and Machine Learning Toolbox are explained. Finally, the book describes various curve fitting techniques using the Curve Fitting Toolbox. Inclusion of all these advanced level topics in the book stands it out from the rest. **KEY FEATURES** Numerous worked-out examples to enable the readers understand the steps involved in solving the chemical engineering problems. MATLAB codes to explain the computational techniques. Several snapshots to help the readers understand the step-by-step procedures of using the toolboxes. Chapter-end exercises including short answer questions and numerical problems. Appendix comprising the definitions of some important and special matrices. Supplemented with Solutions Manual containing complete detailed solutions to the unsolved analytical problems. Accessibility of selected colour figures including screenshots and results outputs of the programs cited in the text at www.phindia.com Pallab_Ghosh **TARGET AUDIENCE** BE B Tech Chemical Engineering ME M Tech Chemical Engineering

Numerical Methods for Chemical Engineering Kenneth J. Beers, 2007 Applications of numerical mathematics and scientific computing to chemical engineering **Introduction to Matlab for Chemical & Petroleum Engineering** Sam Toan, Bahareh Nojabaei, Hertanto Adidharma, 2016-08-17 The importance of using computer-aided calculations for engineers is evident nowadays. Several classes in universities are taught to help engineering students become comfortable in using computation tools. The purpose of this book is to provide a useful reference for students specifically chemical and petroleum engineering majors and learn computer programming using MATLAB. MATLAB is a very good tool as it has various built-in functions. MATLAB also has very easy-to-use graphing tools. These capabilities and features of MATLAB make it a perfect computational tool for undergraduate-level engineering students. The book chapters are designed to cover most of the topics in chemical and petroleum engineering required courses. We first introduce the basics of programming as well as plotting features in MATLAB. The students learn how to solve linear and nonlinear equations and systems of equations using MATLAB in Chapter 6. Curve fitting and interpolation are covered in Chapter 7. The focus of the last several chapters is mostly on differentiation, integration, and solving ordinary and partial differential equations. We provide chemical and petroleum

engineering related examples in each chapter Furthermore some numerical methods that can be utilized at both the undergraduate and graduate levels are also discussed We the authors hope that this book would be helpful for both engineering students and instructors

Matlab. The Language of Technical Computing Alan Nebrida,2022-10-20 Exam Revision from the year 2022 in the subject Mathematics Miscellaneous language English abstract MATLAB The Language of Technical Computing is a document for an introductory course in MATLAB and technical computing This document is not a comprehensive introduction or a reference manual Instead it focuses on the specific features of MATLAB that are useful for engineering classes The lab sessions are used with one main goal to allow students to become familiar with computer software e g MATLAB to solve application problems We assume that the students have no prior experience with MATLAB The availability of technical computing environments such as MATLAB is now reshaping the role and applications of computer laboratory projects to involve students in more intense problem solving experiences This availability also provides an opportunity to easily conduct numerical experiments and to tackle realistic and more complicated problems Originally the manual is divided into computer laboratory sessions The tutorials are independent of the rest of the document The primary objective is to help you learn quickly the first steps The emphasis here is learning by doing Therefore the best way to learn is by trying it yourself Working through the examples will give you a feel for the way MATLAB operates In this introduction we will describe how MATLAB handles simple numerical expressions and mathematical formulas The following tutorial lessons are designed to get you started quickly in MATLAB The lessons are intended to make you familiar with the basics of MATLAB We urge you to complete the exercises given at the end of each lesson
