Object-oriented Design in C++ Using the Standard Template Library Nicholas J. DeLillo,2002 The primary focus of Nick DeLillo's new book is on object oriented design OOD using the Standard Template Library STL The STL provides reusable reliable components for software design so students don't have to be concerned with the correctness and efficiency of the code they design The author assumes students have prior knowledge of data structures and algorithms then builds upon this knowledge by introducing the use of the STL Chapters 1-4 serve as a review of Data Structures and Algorithms including such topics as encapsulation inheritance polymorphism and traditional data structures In Chapter 5 the transition is made to using the STL to accomplish these same tasks enabling students to see the benefit of using these predefined tools The students also are introduced to OOD projects and how the STL is a powerful tool for this type of work While several texts may cover pieces of these topics this is the first text that covers them in one comprehensive book UML and C++ Richard C. Simulation and Event Modeling for Game Developers John P. Flynt,Ben Vinson,2005 Simulation games are unique They have action combat management and strategy By definition a simulation is an imitation So computer simulation games are games that imitate a real life situation Another way to think about it is that simulation games attempt to recreate a past event But games don't always stick to that definition sometimes they attempt to create a situation that we may someday be faced with Event modeling is the fundamental activity of examining a real world event to determine precisely those aspects of the event that can be made the primary objectives of a software development effort Such modeling is essential to the success of any game development effort especially if it focuses on simulation The reason for this is that no simulation program can hope to simulate every aspect of a real world event The simulation must be limited in some way and a technique is at hand

through event modeling to determine which aspects of the event will render the simulation project effective **C++**
