Computational Optimization of Internal Combustion Engines Yu

Shi,Hai-Wen Ge,Rolf D. Reitz,2011-06-22 Computational Optimization of Internal Combustion Engines presents the state of the art of computational models and optimization methods for internal combustion engine development using multi dimensional computational fluid dynamics CFD tools and genetic algorithms Strategies to reduce computational cost and mesh dependency are discussed as well as regression analysis methods Several case studies are presented in a section devoted to applications including assessments of spark ignition engines dual fuel engines heavy duty and light duty diesel engines Through regression analysis optimization results are used to explain complex interactions between engine design parameters such as nozzle design injection timing swirl exhaust gas recirculation bore size and piston bowl shape Computational Optimization of Internal Combustion Engines demonstrates that the current multi dimensional CFD tools are mature enough for practical development of internal combustion engines It is written for researchers and designers in mechanical engineering and the automotive industry
