Origins of the Universe, Life and Species Plammoottil Cherian, 2018-03-22 The relationship between science and theology has been a crisis for humanity since Darwin's publication of *Origin of Species* that affects the very core of scientific and Biblical truths with serious consequences. In this detailed and absorbing book, Dr. Cherian provides astounding facts of science that were deciphered in the last 500 years, each of which is recorded in the Biblical Scriptures. Heeding back to the Biblical account of creation, Dr. Cherian takes the readers from the erroneous notion of the origin of the universe without a cause and abiogenesis as the source of life to the latest scientific discoveries that corroborate the Biblical evidence for divine creation of the universe, life, and species that dispel Darwinian evolution. *The Origins of the Universe, Life and Species* sheds much light for a better understanding of the Scriptures that were hidden to many scientists, researchers, and students to relate the scientific discoveries that reveal the Biblical truths for a better appreciation of the unknown God who reveals himself through the many scientists and their discoveries. Dr. Cherian uses all branches of science from astronomy to zoology, connecting the dots between science and theology that stretches from the highest of heavens, outer space to the deepest of ocean floor, revealing the unknown God to be the KNOWN GOD.

Bio-Climatology for Built Environment Masanori Shukuya, 2019-01-18 Indoor climate is determined by rational lighting, heating, cooling, and ventilating systems. For occupants' well-being, it should be consistent with how regional outdoor climate works in the flow of radiation via four paths of heat transfer: radiation, convection, conduction, and evaporation. This book starts with the relationship between the human body and its immediate environmental space, followed by a brief introduction of passive and active systems for indoor climate conditioning. The nature of light and heat is discussed with a focus on building envelope systems such as walls and windows and then examined from the viewpoint of thermodynamics and human biology. Some examples are given to enable a better understanding of luminous and thermal characteristics of our most immediate environment, particularly for those professionally involved in environmental planning, designing, and engineering, to know about bioclimatic design principles.

The Antisocial Mind Ghahreman Khodadad, 2024-10-16 In this book, Professor Ghahreman Khodadad illuminates the basis of human behavior by examining the structures that underline antisociality. The book's central thesis is that antisocial people are so thanks to biological and neurological structures. The principle of structure to function is used to argue that the brain, without us being conscious of it, produces our behaviors. If this claim is correct, then antisocial individuals are not accountable for their antisocial behavior and they should be treated respectfully instead of being punished. Furthermore, prisons should accordingly be converted into rehabilitation treatment and behavioral research centers. This is a book for the general reader who is interested in the basis of human behavior. It should also be of interest to psychologists, psychiatrists, neuroscientists, geneticists, neurobiologists, and philosophers.

Theistic Evolution J. P. Moreland, Stephen C. Meyer, Christopher Shaw, Ann K. Gauger, Wayne Grudem,2017-11-15 Many prominent Christians insist that the church must yield to contemporary evolutionary theory and therefore modify traditional biblical ideas about the creation of life They argue that God used albeit in an undetectable way evolutionary mechanisms to produce all forms of life Featuring two dozen highly credentialed scientists philosophers and theologians from Europe and North America this volume contests this proposal documenting evidential logical and theological problems with theistic evolution making it the most comprehensive critique of theistic evolution yet produced
