Pfander, 1995 Volume 3 of the Carotenoids series moves into the area of biochemistry biology concentrating on how the carotenoid molecules are formed in nature utilized or modified by living organisms Animals cannot biosynthesize carotenoids de novo Dietary carotenoids provide most of the vitamin A that is vital for health development in humans other mammals The formation of vitamin A the absorption transport deposition of carotenoids in tissues in mammals are described followed by a detailed account of the diverse metabolic reactions by which dietary carotenoids undergo structural stereochemical changes in birds fish invertebrate animals The

relevance of carotenoids for use as markers to trace food chains is also discussed In keeping with the philosophy of the carotenoid series guidance on the application of some of the most important experimental procedures for studies of biosynthesis metabolism are given in the final chapter The information presented analyzed by expert authors in this volume will serve as a useful reference source give valuable guidance on practical strategies procedures as a foundation for the exciting advances that can be expected in carotenoid biosynthesis metabolism in the next few years

Lipids for Functional Foods and Nutraceuticals F. D. Gunstone,2003-01-15 Functional foods and nutraceuticals have become hot topics with an increasing number of books college courses and meetings devoted to this area of interest Foods can be regarded as functional if they can be satisfactorily demonstrated to contain bio active molecules that reduce the risk of disease or act positively to promote good health The active ingredients and components of

functional foods and nutraceuticals often include lipids. They are required in their own right and also for the important minor components such as carotenoids, tocopherols, and sterols which accompany the oils and fats. This is the first book to address specifically the use of lipids in functional foods and nutraceuticals and it will be essential reading for those who produce the lipids and those who seek to incorporate them into appropriate food products. The first chapter is an overview of the development of functional foods. This is followed by chapters devoted to materials which are either lipids or are compounds that are fat soluble and co-occur with oils and fats. These include carotenoids, tocopherols, phytosterols, n-3 omega-3 oils, diacylglycerols, structured lipids, sesame oil, rice bran oil, and oils and preparations containing palmitoleic acid, γ -linolenic acid, stearidonic acid, or conjugated linoleic acid.
